Foreword

It gives me immense pleasure that Hydromet Division of India Meteorological Department has prepared 'Rainfall Statistics of India – 2020'.

Realtime monitoring of rainfall is a very important activity of IMD. The realtime rainfall products are a very useful input for the benefit of society as well as to the weather forecasters. The report contains the details rainfall information in the daily, weekly, monthly, seasonal and annual scale for the districts, states, met sub divisions, four homogeneous regions and for the country with new rainfall normals 1961-2010. The products are available in the form of tabular, graphical and in map. This publication is very important for the Policy Makers, Agriculturists, Planners, Research Scholars, flood forecasters and many more.

This report is an outcome of sincere and consistent effort of all the team members of Hydromet Division, IMD. I take this opportunity to express my appreciation to Dr. M. Mohapatra, DGM, Shri B. P. Yadav, Head, Hydromet Division and their team for putting their best efforts in bringing out this valuable publication successfully.

Dr. M. Ravichandran

Secretary

Ministry of Earth Sciences

Foreword

Rainfall is the primary source of water and is of great importance for India's Economy, especially in agriculture sector. It is highly variable over space and time, leads to flood and drought every year in one or the other part of the country. Rainfall statistics is therefore required by the Policy Makers, Planners, Design Structure Engineers, Agriculturists, Hydrologists, Research Scholars and many more for proper management of water resources and its efficient use. Keeping in view the usefulness of rainfall statistics, the publication of rainfall statistics on annual basis was started 2012 onwards.

It gives me immense pleasure to present the 'Rainfall Statistics of India – 2020' based on the rainfall received during the year and its comparison with normal rainfall based on the rainfall records for the period from 1951-2000.

I appreciate the authors for their painstaking efforts in bringing out this publication.

DR.M. MOHAPATRA
DIRECTOR GENERAL OF METEOROLOGY
INDIA METEOROLOGICAL DEPARTMENT

Preface

India Meteorological Department is using the rainfall data received from a network of more than 4500 rain-gauge stations which are under District wise Rainfall Monitoring Scheme (DRMS) on real time and prepares the rainfall statistics, both in tabular as well as in map/graphical form. The statistics is prepared for the administrative zones like districts, states and for the country. The statistics is also prepared for the 36 Meteorological Subdivisions and for the four broad regions (North West India, Central India, South Peninsula and, North & North East) of India. The rainfall is prepared at various temporal scales viz., weekly, monthly, seasonal and annual basis. Besides this, the hydromet division of IMD also monitors the Meteorological Subdivisional rainfall on daily basis during the Southwest Monsoon season for the whole country and during Northeast Monsoon (Post-Monsoon) season for South Peninsula Region. Although, the current real-time rainfall products are uploaded on IMD website at <http://hydro.imd.gov.in/hydrometweb/>, updated statistics is in most demand by various users as it includes latest data in addition to station's data that is received in near realtime mode, for updating the statistics. Hope, this publication containing updated rainfall statistics for the year 2020 would be useful for the various stakeholders.

We are thankful to Davinder Sharma, Rameshwar Ram, Smt. Malini Thakur, P.K. Panchal, Smt. Sushma Singh and Ashok Kumar of Hydromet Division, New Delhi for their whole-hearted contribution in bringing out this publication.

B. P. Yadav, Rahul Saxena, Dr. Ashok Kr. Das, S. K. Manik and Asok Raja S.K.

1. INTRODUCTION

Rainfall is highly variable in time and space. Over 75% of the annual rainfall is received in the four rainy months for June to September only there by leading to large variations on temporal scale. The average annual rainfall is 119 cm, but it has great spatial variations.

The areas on the Western Ghats and the Sub-Himalayan areas in North East and Meghalaya Hills receive heavy rainfall of over 250 cm annually, whereas the Areas of Northern parts of Kashmir and Western Rajasthan receive rainfall less than 40 cm.

Figure 1. shows the network used for computation of normal rainfall. Normals have been computed using rainfall records of 50 years (1961-2010) of a network of 3200 Stations all over the India. The two significant features of India's Monsoon rainfall are that, in the north India, rainfall decreases westwards and in the Peninsular India, it decreases eastwards and then increases in the coastal region.

2. METHODOLOGY

The rainfall statistics is computed based on the receipt of rainfall data from about 4500 stations spread over the entire country. Based on daily rainfall data of these stations, the rainfall of all the districts is computed and using the rainfall of the districts, rainfall statistics for the Meteorological (Met.) Subdivisions, states, the four broad regions and for the whole country have been computed.

The present publication includes the updated rainfall statistics for the country as a whole, for all the four broad regions of India, 36 Met.Subdivisions, all States and UTs (37) and 690 Districts of India (+7 From 2019).

The statistics is provided on monthly, seasonal (Winter (Jan-Feb), Pre-Monsoon (Mar-May), Southwest (SW) Monsoon (Jun-Sep) and Post-Monsoon (Oct-Dec) and on annual basis. The Rainfall Normals used in this report are based on the rainfall records for the period from 1961-2010.

Percentage departure of rainfall from Rainfall Normals have been color coded as per their categories. The list of categories, their corresponding ranges and color codes is given in Table 1.

Table 1. The list of categories, their corresponding ranges and color codes

Category	Departure from Normals	Colour Code
Large Excess (LE)	60% or more	
Excess (E)	20% to 59%	
Normal (N)	-19% to +19%	
Deficient (D)	-20% to -59%	
Large Deficient (LD)	-60% to -99%	
No Rain	-100%	
No Data	Data Not Available	

3. RAINFALL STATISTICS FOR THE COUNTRY & BROAD REGIONS

3.1 SEASONAL & ANNUAL

The annual rainfall received by the country was 110% (128.9cm) of its normal rainfall of 118.7 cm. All India rainfall for SW monsoon season 2020 was 109% (96.1 cm) of its normal rainfall of 89 cm. The region-wise and the country's seasonal and annual actual observed rainfall are given in Table 2 and percentage departure from normal rainfall are given in Table 3. It may be observed that % departure of actual observed rainfall both for the year and for SW Monsoon season was positive for the country as a whole. South Peninsula showed maximum sw-monsoon rainfall with +29% departures from Normal totaling 937.4 mm.

While region wise both annually and during SW Monsoon season, East and North East India, Central India and South Peninsula have positive % Departures from Normal, it was -ve % departures from Normal for North West India region.

Central India experienced the highest positive % departure of observed rainfall (87%) for Winter Season & (104%) for Pre Monsoon Season whereas South Peninsula received (29%) for Monsoon Season & (15%) for Post Monsoon Season. South Peninsula India experienced the highest negative % departure (-37%) for Winter & (-4%) for Pre Monsoon Season of observed rainfall while North West India have experienced the highest negative % departure (-14%) for Monsoon Season & (-39) for Post Monsoon season.

Table 2: Region-wise seasonal and annual rainfall (mm) - Year 2020

RAINFALL STATISTICS FOR THE COUNTRY & BROAD REGIONS

3.2 MONTHLY RAINFALL

The observed monthwise cumulative rainfall and monthly % departure from normal, for the country and for four broad regions of the country are given at Table (4) and Table (5) respectively. The country as a whole received maximum rainfall in the month of August as 327.8 mm and minimum in the month of February as 12.1 mm. Regionwise, the maximum monthly cumulative rainfall of 495.0 mm rainfall was received in August in Central India. Minimum monthly cumulative rainfall is 3.7 mm in February in South Peninsula region.,

Comparing % departures of monthly observed rainfall from monthly normals shows that maximum positive departure of 219% was recorded in Central India in the month of March, where as the maximum negative departure (-81 %) in the month of November in Central India. It may be observed (Table 5) that the country as a whole received normal to excess rainfall for all the months except February when the rainfall was deficient.

RAINFALL STATISTICS FOR THE COUNTRY & BROAD REGIONS

3.3 SOUTHWEST MONSOON – 2020

The rainfall statistics for the Monsoon season and individual months for the country as a whole is given at Table 6 and graphically represented in Figure 2. Monthly (JJAS) & seasonal observed rainfall and the % departure from normal have been depicted in Figure 3. For the SW Monsoon season 2020, country as a whole received above Normal rainfall (9% departure from Normal). Monthwise, the country was in Normal category in (17%) June, (-10%) in July and (5%) in September and excess (27%) in the month of August.

Table 6: Rainfall (mm) for the country: SW Monsoon Season – 2020

MONTH	OBSERVED	NORMAL	% DEPARTURE FROM NORMAL
JUNE	195.6	166.9	17%
JULY	257.1	285.3	-10%
AUGUST	327.8	258.2	27%
SEPTEMBER	178.0	170.2	5%
SW MONSOON	961.4	880.6	9%

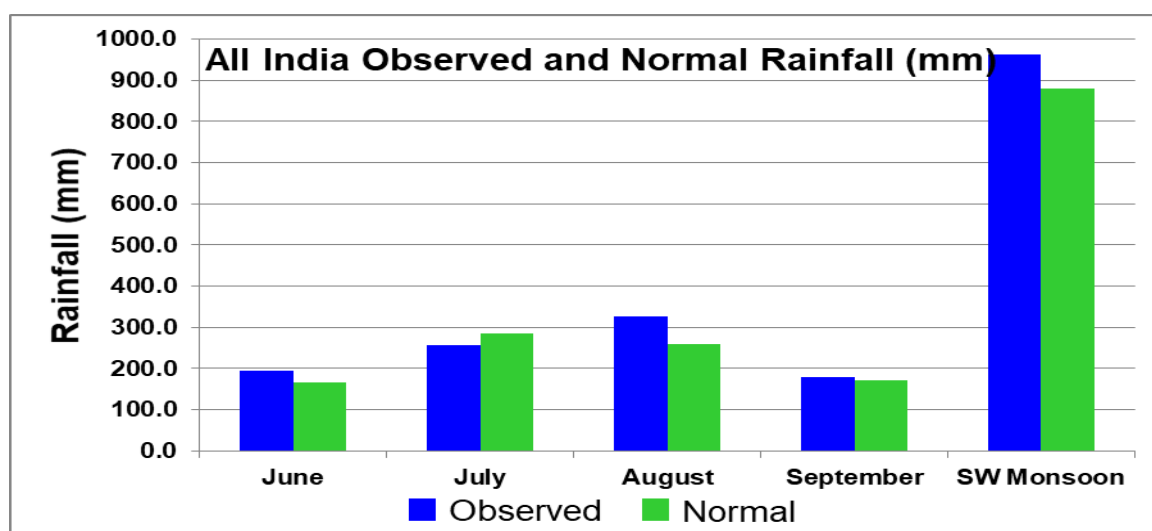

Figure 2: All India Rainfall – SW Monsoon 2020

Figure 3: Percent Departure of All India Rainfall – SW Monsoon 2020

3.4 REGION-WISE DAILY RAINFALL SERIES – SW MONSOON 2020

Realtime daily rainfall (in mm) and its long term (1961-2010) normal value for the country as a whole and for the four homogeneous regions during 1 June to 30 September are shown in Figure 4 to 8. For the country as a whole, daily averaged observed rainfall was above or near normal on most days in June. It remained above normal to normal on some days of July month. The average daily rainfall remained above normal during many days in the month of August and in the second half of September. The temporal distribution of SW Monsoon rainfall of the country at Figure 4 shows that the rainfall was good throughout the season but there were four deficient rainfall spells of more than 5 days during 28 June to 03 July, 13 July to 19 July, 22 July to 28 July and 01 September to 06 September for the country as a whole.

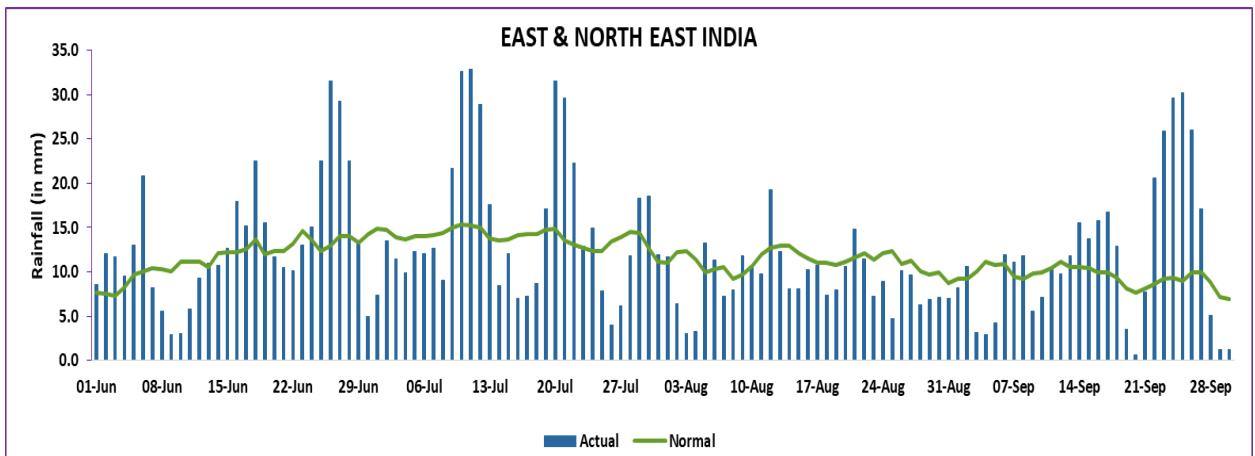

Figure 8: East & North East India - SW Monsoon Rainfall Distribution - 2020

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION**4.1 SEASONAL & ANNUAL**

Seasonal and annual observed rainfall statistics during the year 2020 for all the 36 Met. Subdivisions and percentage departure of rainfall from normal has been given in Table 7 & 8 respectively. It may be observed from annual rainfall that Coastal Karnata received highest annual rainfall of **4185.9** mm and West Rajasthan received lowest annual rainfall of **399.0** mm. While comparing it is found that annual rainfall remained in Normal to Excess Category for most of the Met. Subdivisions. Only two Met subdivisions i.e. Saurashtra & Kutch and Rayalaseema were in Large Excess rainfall category and West Uttar Pradesh were found to be in deficient rainfall category.

During the SW Monsoon season Coastal Karnata received highest seasonal rainfall of **3681.9** mm While West Rajasthan received lowest seasonal rainfall of **336.2** mm. Five met subdivisions namely NMMT, West-UttarPradesh, Uttarakhand, Himachal Pradesh and J&K and Ladakh were under Deficient category None of the Met. Subdivisions however were in Large Deficient category during Monsoon-2020.

4.2 CATEGORY-WISE SEASONAL AND ANNUAL

Annual rainfall statistics for the year 2020 show that, 2 Met. Subdivisions remained in Large Excess, 10 in Excess and 22 in Normal category of rainfall while 2 Met. Subdivision remained in Deficient category of rainfall. The category wise statistics and chart for seasonal distribution of no. of Met. Subdivisions have been given in Table 9 and Figure 9 respectively.

Table 9: Categorywise number of Met. Subdivisions - seasonally and annually

CATEGORY	WINTER	PRE-MONSOON	SW MONSOON	POST-MONSOON	ANNUAL
L. EXCESS	6	13	2	2	2
EXCESS	5	4	13	9	10
NORMAL	7	11	16	9	22
DEFICIENT	7	6	5	11	2
L. DEFICIENT	9	2	0	5	0
NO RAIN	2	0	0	0	0

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

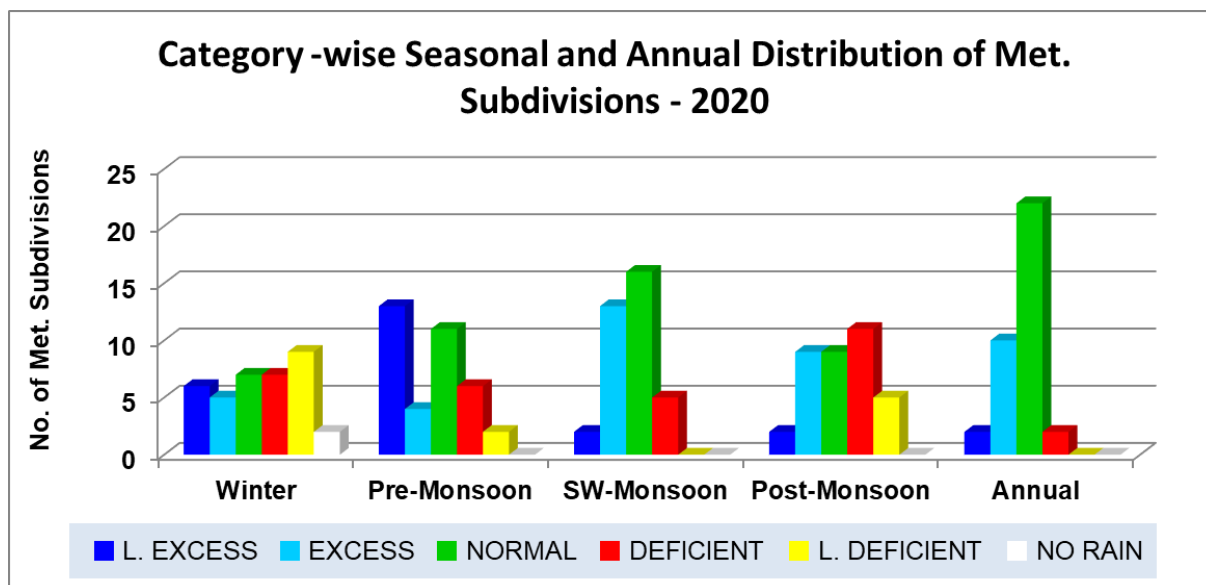

Figure 9: Category-wise Met. Subdivisions – seasonally and annually

Percent distribution of Met.Subdivisional area of the country under different categories in the four seasons and for the year has been depicted in Figure 10.

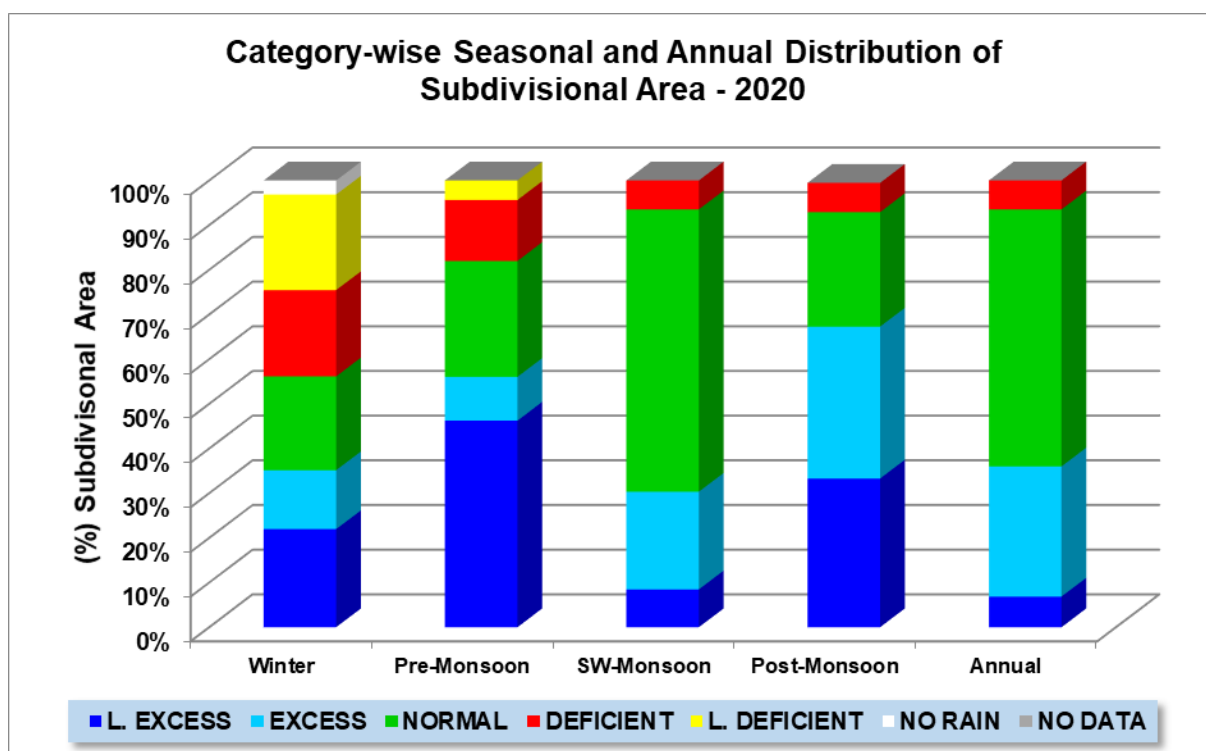

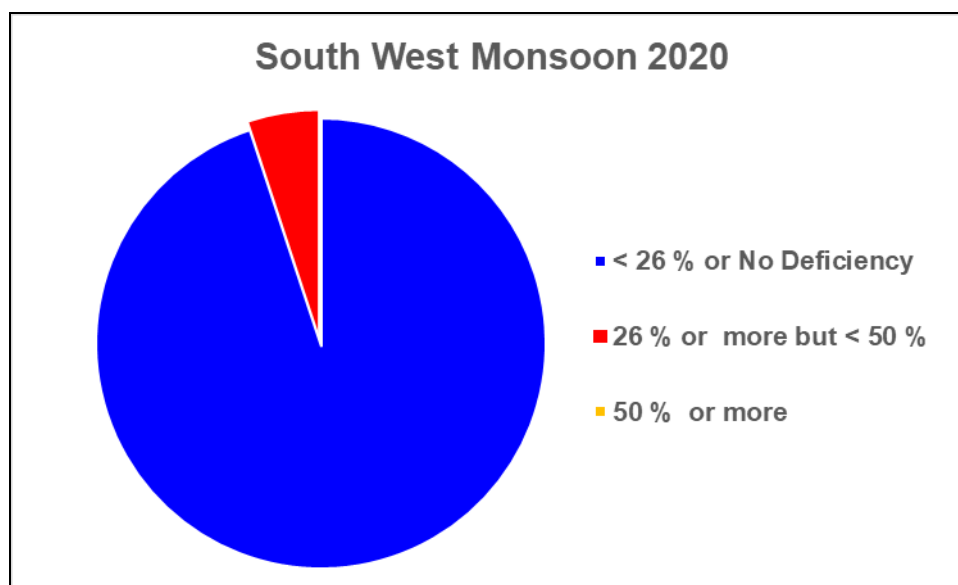

Figure 10: % Area of the Met. Subdivisions under different rainfall categories- Seasonal & Annual

4.4 AREA (%) UNDER RAINFALL DEFICIENCY– SW Monsoon 2020

Area (%) of the 36 Met.Subdivisions of India under different categories of rainfall during SW Monsoon (June-September) have been given below in tabular form in Table 10 and has been depicted in graphical form in Figure 11 as well. Area distribution shows fairly good spatial distribution of Rainfall with 95 % of country area did not report any deficiency of rainfall and only 05% area under moderate deficiency. No area experienced severe deficiency of Rainfall.

Table 10: Met. Subdivisional Area (%) under Rainfall Deficiency – SW Monsoon 2020

Deficiency in Rainfall	Deficiency	% Area of Met. Subdivisions of India
< 26 %	No	95%
26 % or more but < 50 %	Moderate	05%
50 % or more	Severe	00%

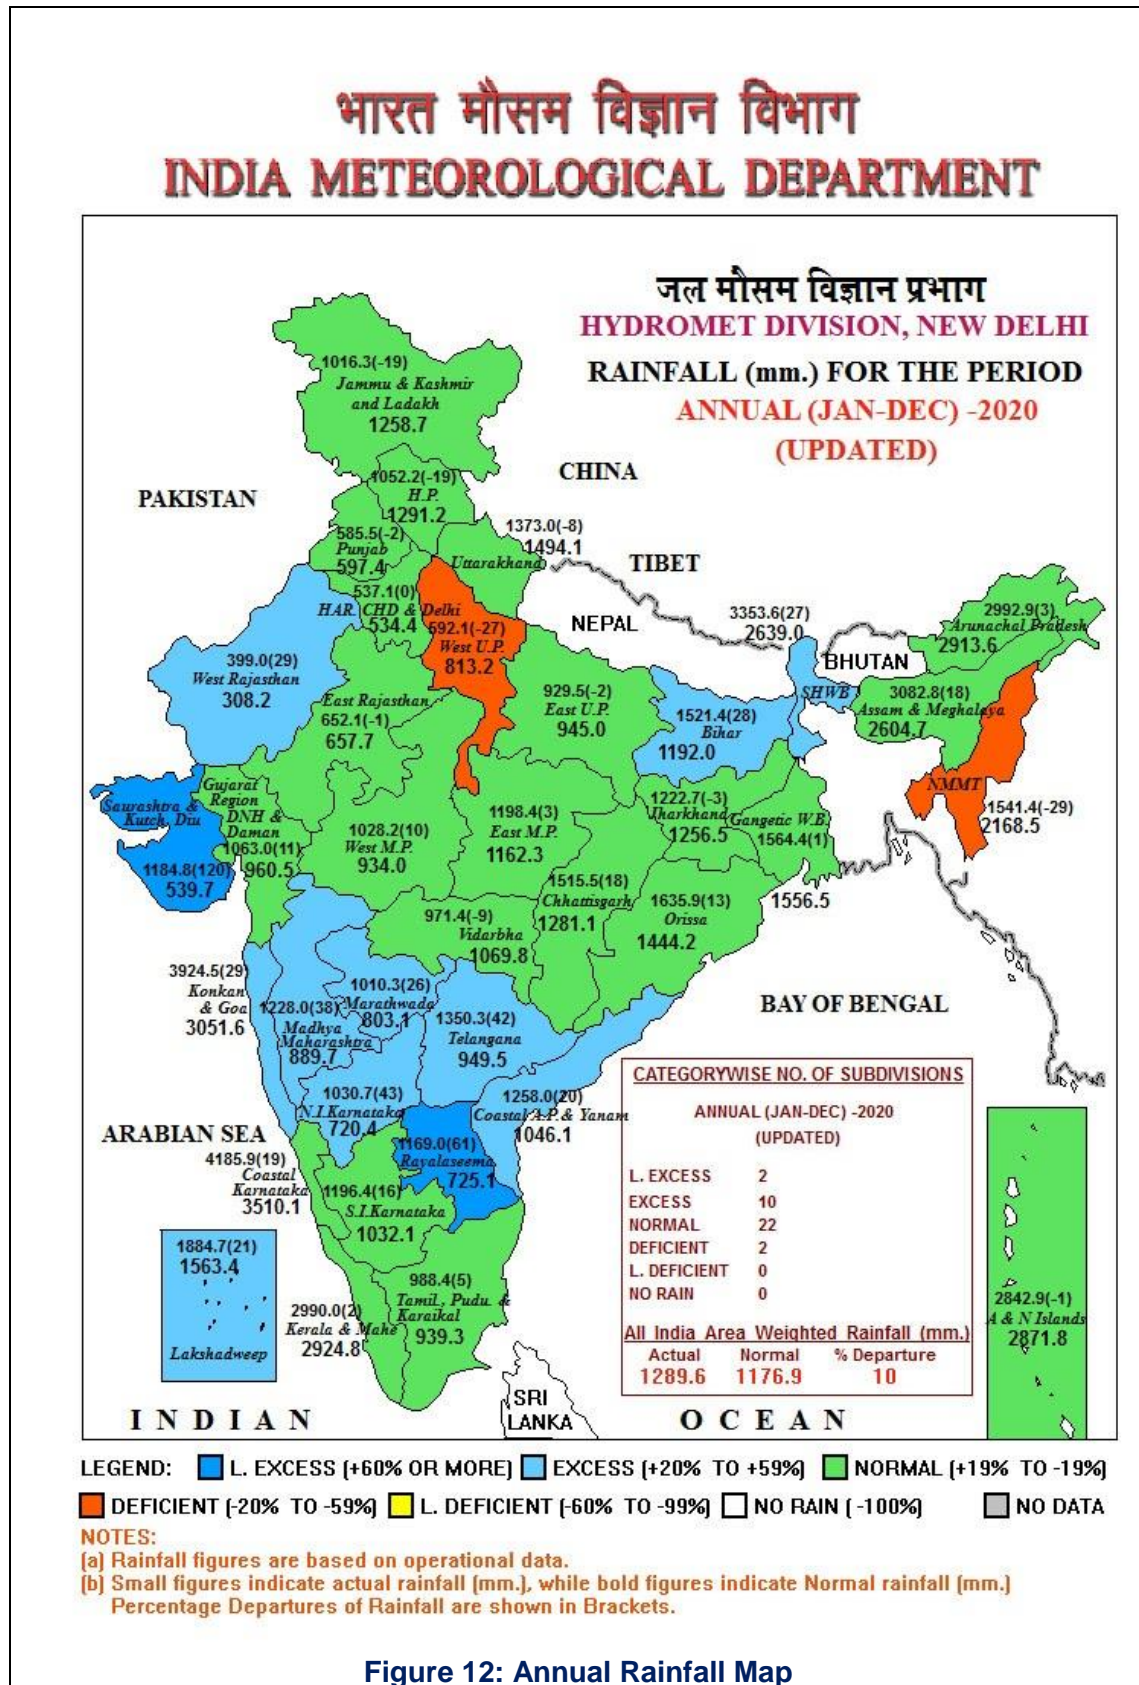

**Figure 11: Met. Subdivisional Area (%) under Rainfall Deficiency – SW Monsoon 2020**

4.5 ANNUAL & SEASONAL RAINFALL MAPS

Met.Subdivision-wise rainfall maps for the year 2020 and for the four seasons depicting the observed and normal rainfall values alongwith their percentage departure from normals with defined colors for different categories are given below at Figure 12 to Figure 16.

The normal rainfall values are shown in Bold figures on the map where as the actual rainfall are shown in small figures. Percentage departures of rainfall are shown within the brackets. Annually and for the SW-Monsoon season country experienced above normal rainfall with positive 10% & 9 % departures from the Normal respectively.

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

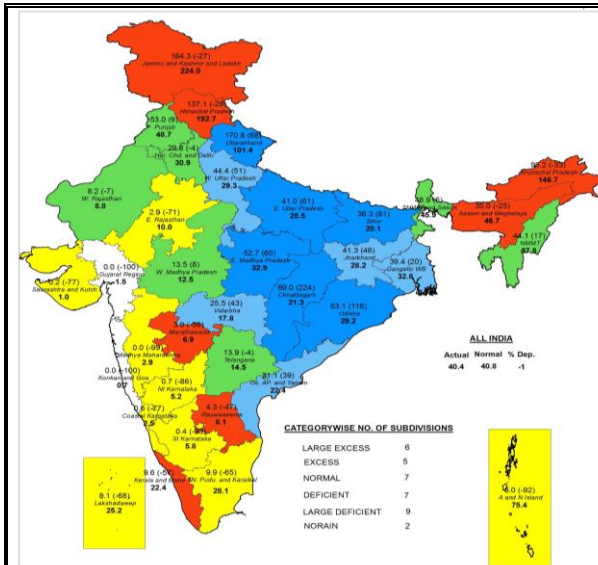

Figure 13: Winter Rainfall Map

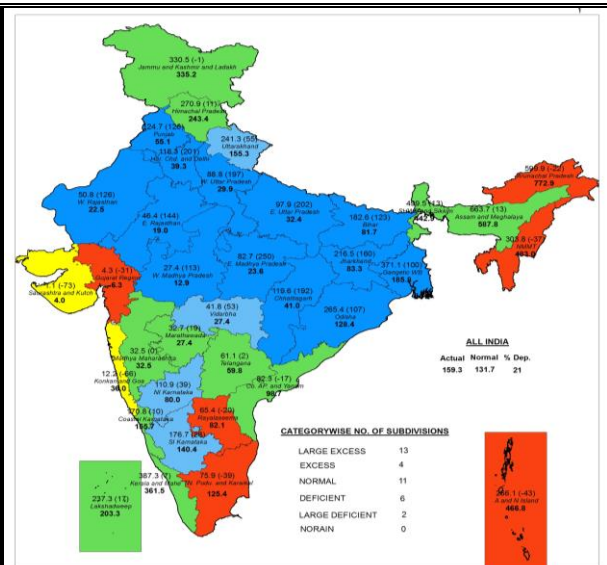

Figure 14: Pre-Monsoon Rainfall Map

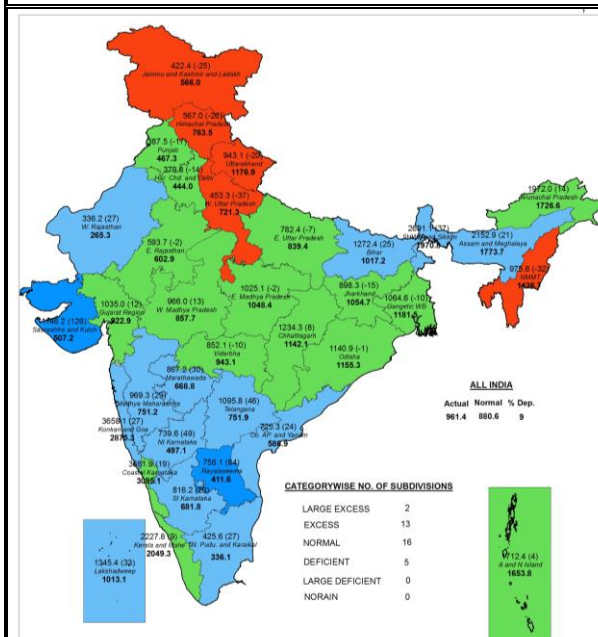

Figure 15: SW Monsoon Rainfall Map

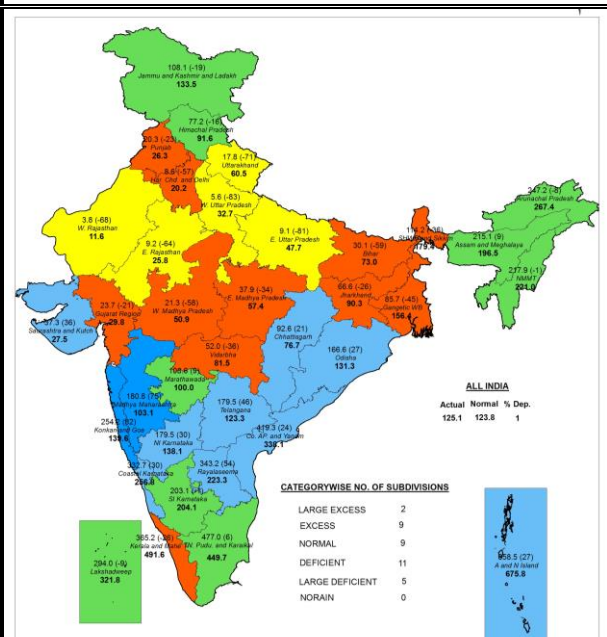

Figure 16: Post-Monsoon Rainfall Map

■ Large Excess [60% or more] ■ Excess [20% to 59%] ■ Normal [-19% to 19%] ■ Deficient [-59% to -20%] ■ Large Deficient [-99% to -60%] ■ No Rain [-100%] ■ No Data

NOTES :

- a) Rainfall figures are based on operation data.
- b) Small figures indicate actual rainfall (mm), while bold figures indicate Normal rainfall (mm).
- c) Percentage Departures of rainfall are shown in brackets.

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4.5 MONTHLY RAINFALL STATISTICS

Met. Subdivision-wise monthly observed rainfall and % departure of rainfall from their normal rainfall have been given in Table 11 and Table 12 respectively.

Table 11: Met. Subdivision-wise monthly rainfall (mm) - Year 2020

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4.6 CATEGORY-WISE MONTHLY DISTRIBUTION

The statistics and chart for monthly distribution of no. of Met. Subdivisions in different categories are given below in Table 13 and Figure 17 respectively.

It may be observed (Table 13) that more Met. Subdivisions were in "Above Normal" rainfall category for the period from March to September. However for the months of February, October, November and December they were in the large deficient/deficient/No Rain category.

Table 13: Categorywise monthly number of Met. Subdivisions - Year 2020

Category	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
L. EXCESS	14	3	19	13	8	4	4	6	7	8	5	6
EXCESS	5	0	6	6	10	10	6	10	10	3	5	3

STATE-WISE RAINFALL STATISTICS

5. STATE-WISE RAINFALL STATISTICS**5.1 SEASONAL & ANNUAL**

Statewise seasonal and annual observed rainfall, and its percentage departure from normal rainfall for the states have been given in Table 14 and Table-15 respectively. It may be observed that during 2020, annual highest area weighted rainfall of **5649.1** mm was received at Meghalaya and the lowest rainfall of 24.2 mm was received at Ladakh (UT). However, on comparing with Normals, it may be seen that Gujarat has the highest positive departure of 55% from where as Ladakh (UT) remained with highest negative departure (-77%) from their respective normals.

Table 14: State-wise Seasonal and Annual Rainfall (mm) - Year 2020

5.2 CATEGORY-WISE SEASONAL AND ANNUAL DISTRIBUTION:

Statewise rainfall statistics for the year 2020 shows most of the states in Large Excess/Excess/Normal category both annually and for the Winter, Pre Monsoon, Monsoon and Post Monsoon season.

States of Nagaland, Manipur and Mizoram were in deficient category for annual rainfall. The statistics and chart depicting the number of states in different rainfall categories during the seasons and for the year have been given at Table 16 and Figure 66 respectively.

Table 16: Category-wise Number of States - Seasonally and Annually - Year 2020

CATEGORY	WINTER	PRE-MONSOON	SW MONSOON	POST-MONSOON	ANNUAL
L. EXCESS	5	13	0	0	0
EXCESS	6	2	10	8	10
NORMAL	8	10	19	14	23
DEFICIENT	8	8	7	10	3
L. DEFICIENT	7	2	1	5	1
NO RAIN	3	2	0	0	0
NO DATA	0	0	0	0	0

STATE-WISE RAINFALL STATISTICS

Figure 66: Category-wise distribution of States – Seasonally and Annually

Percent distributions of area of the states of the country under different categories in the four seasons and for the year have been depicted in Figure 67.

Figure 67: % Area of the country under different categories – Seasonally & Annually

STATE-WISE RAINFALL STATISTICS

5.3 AREA (%) UNDER RAINFALL DEFICIENCY– SW MONSOON 2020

Area (%) of the 37 states and UTs of India under different categories of rainfall deficiency during SW Monsoon (June-September) have been given below in tabular form in Table 17 and has been depicted in graphical form in Figure 69 as well. During SW Monsoon season 2020, only 1% area of States of the country experienced severe rainfall deficiency and 99% of the statewise area did not reports No deficiency.

Table 17: Area (%) of States of the country under Rainfall Deficiency – SW Monsoon 2020

Deficiency in Rainfall	Deficiency	% Area of States of Country
25 % or less	No	99%
26 % or more but < 50 %	Moderate	1%
50 % or more	Severe	0%

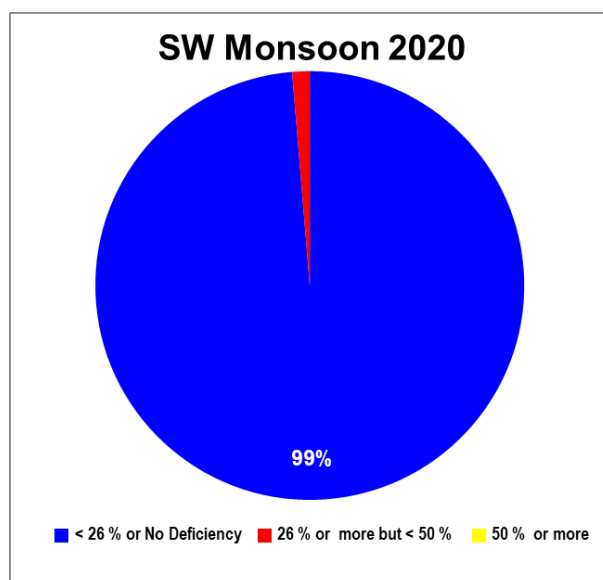

Figure 68: Area (%) of States under Rainfall Deficiency – SW Monsoon 2020

5.4 MONTHLY RAINFALL STATISTICS

Statewise monthly observed rainfall (mm) for the states have been given in Table 18. During SW Monsoon season, monthly highest rainfall of **1470.9** mm occurred over the state of Dadra & Nagar Haveli (UT) in the month of August and minimum rainfall occurred 0.2 mm over the Ladakh (UT) in the month of September.

Statewise percentage departure of monthly rainfall from their monthly normal rainfall have been given in Table 19. It is observed that months of February was the worst performing month when 29 states/UTs remained in Deficient/ Large Deficient/ No Rain category of rainfall. Highest number of states in Large excess/excess/Normal category were observed in the months of June, July and August.

STATE-WISE RAINFALL STATISTICS

While most states of Northwest India observed Normal to above Normal Rainfall for the months from March-August, States of Central & South Peninsula observed deficient to Large deficient rainfall during the Winter months.

6. DISTRICT-WISE RAINFALL STATISTICS

6.1 SEASONAL & ANNUAL

The rainfall statistics for 690 districts of India was prepared during the year 2020. The districtwise observed seasonal and annual rainfall for the districts whose data are received throughout the year is given in Table 22. Also, the percent departures of observed rainfall from their normals have been given in Table 23. It may be seen that the rainfall for some of the districts are not available, which is due to non-availability of data either by sudden developments of faults in the instruments or by remote/difficult locations of the stations in the districts. Annually, the District of East Khasi Hills in Meghalaya received the highest rainfall of 10381.8 mm where as the district of Ladakh in Leh (UT) received the lowest rainfall of 24.2 mm.

Table 22: District-wise seasonal and annual Rainfall (mm) - Year 2020

6.2 CATEGORYWISE SEASONAL AND ANNUAL DISTRIBUTION

The categorywise seasonal and annual distribution of no. of districts of India has been given in Table 24 and a chart depicting the distribution is also given at Figure 106. It may be observed that out of the 690 districts, more than 2/3rd of the districts during Pre Monsoon, Monsoon & annually experienced excess to normal rainfall. Winter season saw excess to normal rainfall in nearly half (372) of all India districts.

Table 24: Category-wise Number of Districts - Seasonally and Annually - Year 2020

CATEGORY	WINTER	PRE-MONSOON	MONSOON	POST-MONSOON	ANNUAL
L. EXCESS	151	332	60	60	44

NO RAIN	96	13	0	15	0
NO DATA	8	16	2	5	21

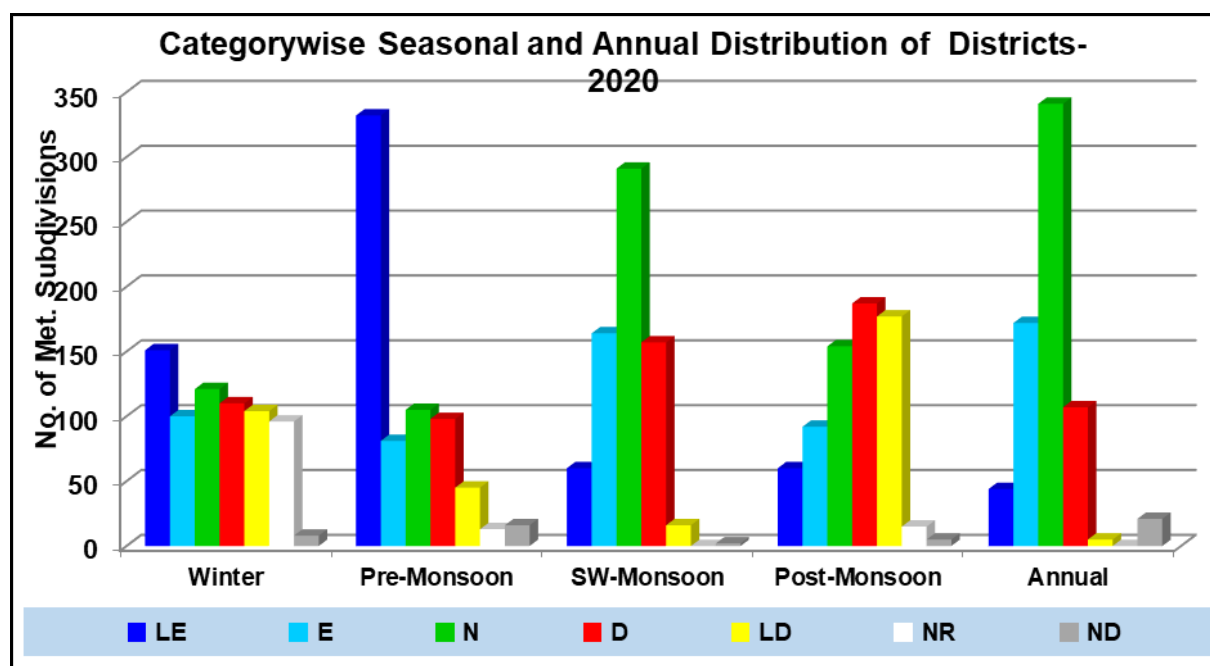

Figure 106: Categorywise Seasonal and Annual Distribution of No. of Districts – 2020

Distribution of districts of India in terms of their areas under different categories in the four seasons and for the year 2020 has been depicted in Figure 108.

Figure 107: Category-wise distribution of Area of Districts – Seasonally and Annually – Year 2020

6.3 MONTHLY RAINFALL STATISTICS

The district-wise observed monthly rainfall is given in Table 25. Also, the percent departures of observed monthly rainfall from their normals have been given in Table 26. The rainfall statistics in respect of the districts whose data is not available through out the year have not been included in these tables.

Table 25: District-wise Monthly Rainfall (mm) – Year 2020

The statistics and chart for categorywise distribution of districts for different months have been given at Table 28 and Figure 108 respectively. The districtwise rainfall distribution both spatially and temporally differ from subdivisionwise or statewise rainfall distribution.

7. ANNUAL AND MONSOON RAINFALL FROM 2000 TO 2020

The annual and monsoon rainfall and their respective departures from normal rainfall from the years 2000 to 2020 are shown in Table 29 and Figure 109 - Figure 112. Of the last 21 years, 2020 has proved to be the best year in terms of actual observed annual rainfall. Year 2019 & 2020 reported maximum +ve % departures from Normal annually (110% of LPA) along with the area weighted rainfall of 1288.8 & 1289.6 mms respectively. Till 2020, out of 19 Normal Monsoon years, five years viz 2005, 2010, 2013, 2019 and 2020 years were with +ve % departures for annual rainfall and seven years viz 2003, 2007, 2010, 2011, 2013, 2019 and 2020. +ve % departures for Monsoon rainfall.

Table 29: SW Monsoon and Annual Rainfall (2000-2020)

YEAR	SW – MONSOON RAINFALL (mm)		ANNUAL RAINFALL (mm)

**Figure 109: Annual Rainfall 2000-2020**

Figure 110: % Departures of Annual Rainfall 2000 – 2020

During last 21 years, the country received Monsoon rainfall of 21% or less of its normal rainfall. Southwest Monsoon Rainfall has also recorded highest rainfall of 971.0 mm (+10% of LPA) since 2000.

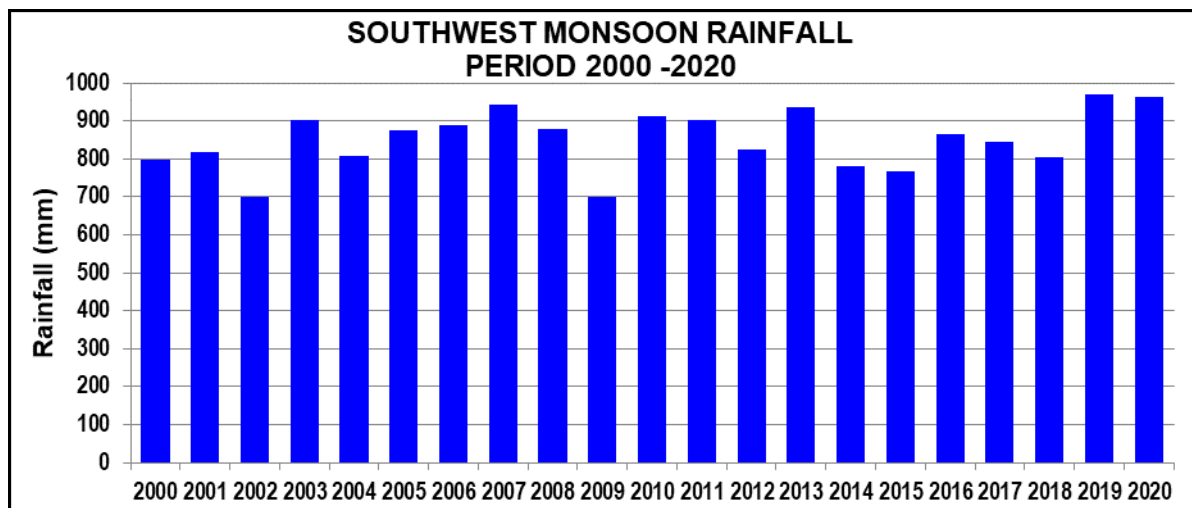

Figure 111: SW Monsoon Rainfall 2000-2020

Figure 112: % Departures of SW Monsoon Rainfall 2000 – 2020

8. EXTREME RAINFALL EVENTS

An extreme rainfall event is one in which 204.5 mm (21 cms) or more of rain falls over a region within 24 hours.

There has been an increasing trend in the high impact rainfall events especially during the last decade. Some of the watershed events have happened during this period. Chennai (2015), Kedarnath (2013), Kerala (2018) and Mumbai (2018) floods were characterized by torrential downpour leading to Flash Floods in the region. The Indian southwest monsoon from June to September has some intra-seasonal oscillations and these oscillations are sometimes associated with very intense rain episodes over different parts of India leading to significant impact which are both visible (Losses in terms of Life and property) and non-visible impacts (social and psychological).

India has experienced less “extreme rainfall events” in 2020 as compared to 2019. An analysis of daily rainfall between 1901 and 2010 by the Indian Institute of Tropical Meteorology (IITM), Pune, showed a decadal increase of about 6% in “extreme rainfall”, events with the frequency increasing post-1981. Table 30 shows the extreme rainfall events during the Year 2020 along with the places where such events have occurred with rainfall amount in CM.

The frequency of the occurrences of extreme rainfall events pan India shows a peak of 172 extreme events ($r/f \geq 21$ cms) occurring in the month of Aug spread over 23 days followed by the month of July with 76 events spread over a period of 19 days making Aug as the most active month for such activities Fig (113).

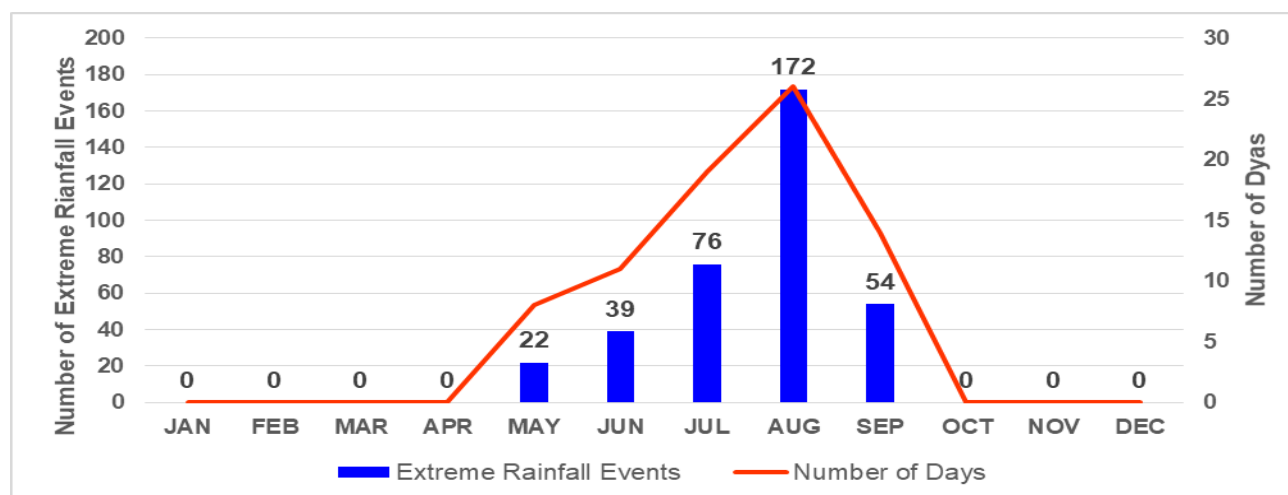

Figure 113: Extreme Rainfall Events/Days for Country a whole during 2020

9. SALIENT FEATURES OF RAINFALL DURING 2020

1. The country received actual annual rainfall of 1289.6 mm which was 110% of its long period average (LPA).
2. The country received actual SW Monsoon season (June to September) rainfall of **961.4** mm which was **109%** of its long period average (LPA).
3. The rainfall for the country as whole during Pre-monsoon, Postmonsoon and Winter season was **159.3** mm, **125.1** mm & **40.4** mm which was **21%**, **1%** & **-1%** of LPA respectively.
4. The rainfall for the seasons for the country as a whole was more than the normal value for the all the seasons except Winter.
5. Rainfall distribution during SW Monsoon season:
 - a. **Region Wise:** North West India, Central India, South Peninsula, East & North East India received actual rainfall of 516.5 mm, 1122.4 mm, 937.4 mm, 1509.0 mm which was -14%, 15%, 29%, 07% of LPA respectively.
 - b. **Month Wise:** The actual rainfall for the country as a whole during June, July, August & September was 195.6 mm, 257.4 mm, 299.9 mm, 178.0 mm which was 17%, -10%, 27% and 05% of LPA respectively.
 - c. **Met Sub Division Wise:** Out of 36 met sub divisions, 2 met sub divisions received Large Excess rainfall, 13 met sub divisions received Excess rainfall, 16 met sub divisions received Normal rainfall and 5 met sub divisions received Deficient rainfall.
 - d. **District Wise:** As per available data, out of 690 districts for which rainfall statistics was prepared, 60 districts received Large Excess rainfall, 164 districts received Excess rainfall, 291 districts received Normal category of

- rainfall, 157 districts received Deficient rainfall. 16 districts received Large Deficient rainfall and there was no data received for 2 districts.
6. The rainfall deficiency for the country as a whole was maximum (1%) during Winter season.
 7. In the four meteorological homogeneous regions, highest positive departure from Normal of 104% was experienced in Central India during Pre Monsoon season, whereas highest negative departure of 39% was observed in NorthWest India during Post Monsoon season.
 8. Month wise, maximum positive departure of 219% was recorded in the month of March in Central India and the maximum negative departure of 94% was recorded in the month of October in North-West India.
 9. Met sub-division-wise Annual and Seasonal rainfall distribution:
 - a. **Annual:** Coastal Karnataka received highest rainfall of 4185.9 mm and West Rajasthan received lowest annual rainfall of 399.0 mm.
 - b. **SW Monsoon season:**
 - i. Coastal Karnataka received highest rainfall of 3681.9 mm and West Rajasthan received lowest annual rainfall of 336.2 mm.
 - ii. West Uttar Pradesh recorded highest deficiency of 37% whereas highest positive departure of 126% was recorded in Saurashtra & Kutch.
 10. Annually, the District of Udupi in Karnataka received the highest rainfall of 5245.3 mm where as the District Ladakh in Ladakh (UT) received the lowest rainfall of 65.5 mm.
