#### Foreword

It gives me immense pleasure to know that Hydrometeorology Division of India Meteorological Department (IMD) has prepared an annual report entitled 'Rainfall Statistics of India - 2022'. The report has been painstakingly compiled using the station level rainfall data from more than 5900 DRMS stations.

Real-time monitoring of rainfall provides useful inputs for informed decisions benefitting the society. The report contains the detailed rainfall information in monthly, seasonal and annual scale for the districts, states, met sub divisions, four homogeneous regions and for the country. The products available in both tabular and graphical formats in addition to thematic maps provide a lucid description for easy comprehension. This publication is very important for the Policy Makers, Agriculturists, Planners, Research Scholars, flood forecasters and many more.

This report is an outcome of sincere and consistent effort of all the team members of Hydrometeorology Division, IMD. I take this opportunity to express my appreciation to Dr. M. Mohapatra, DGM, Shri S. C. Bhan, Head, Hydrometeorology Division and their team of scientists and staffs for putting their best efforts in brings out this valuable publication successfully.

  
(M. RAVICHANDRAN)

## Foreword

Rainfall over India depicts large inter-annual and intra-seasonal variations. The variation over different regions is manifested in the pan-India rainfall distribution. While Indian sub-continent experiences predominantly two Monsoon seasons, the rainfall during southwest monsoon season (June to September) has greater significance for India's Economy, especially in agriculture and water resources sector. Analysis of precipitation distribution and trends is critically important considering the dependence of food security and economy on the timely availability of water.

The intra-seasonal variability in rainfall leads to flood and drought every year in one or the other part of the country. Rainfall statistics are, therefore, required by the Policy Makers, Planners, Structure Engineers, Agriculturists, Hydrologists, Research Scholars and many more for proper management of water resources and its efficient use in various purposes. Keeping in view the usefulness of rainfall statistics, the publication of rainfall statistics on annual basis was started 2012 onwards. The current near real-time observed rainfall products are uploaded on IMD website at <http://hydro.imd.gov.in/hydrometweb/>. The updated and compiled statistics is prepared including updated data. Hope, this updated publication on rainfall statistics for the year 2022 would be useful for the various stakeholders.

It is a great privilege to present the 'Rainfall Statistics of India - 2022' and I appreciate the authors for their efforts in bringing out this publication. I thank and appreciate my colleagues in Hydrometeorology Division of IMD, New Delhi for their whole-hearted efforts in bringing out this publication.

  
(MRUTYUNJAY MOHAPATRA)

## **Preface**

India Meteorological Department operates a District wise Rainfall Monitoring Scheme (DRMS) to prepare rainfall statistics, in tabular as well as in graphical forms, using real-time rainfall data received from a network of more than 5900 rain-gauge stations. The statistics are prepared for the administrative zones like districts, states and for the country. The statistics is also prepared for 36 Meteorological Subdivisions and for four broad regions (North West India, Central India, South Peninsula and, North & North East) of India; and at various temporal scales, viz., daily, weekly, monthly, seasonal and annual basis. Although, the current real-time rainfall products are uploaded on IMD website at <http://hydro.imd.gov.in/hydrometweb/>, updated statistics is in most demand by various users as it includes additional data received in delayed mode. I hope, this publication containing updated rainfall statistics for the year 2022 would be useful for the various stakeholders.

We are thankful to Shri Rameshwar Ram, Shri Ashok Kumar & Shri Davinder Sharma of Hydrometeorology Division, New Delhi for their whole-hearted contribution in bringing out this publication.

## 1. INTRODUCTION

Near Real time Rainfall monitoring of the country is one of the major activities of hydrometeorological services of India Meteorological Department (IMD) which is operational at Hydrometeorology Division in the office of Director General of Meteorology. The Government of India initiated District-wise Rainfall Monitoring Scheme in 1989 on persistent demands from Ministry of Agriculture, Planning Commission, Prime Minister's office and other agencies. There are more than 5600 raingauge stations under the scheme which is used in preparation of the real time rainfall statistics for different spatial and temporal scale. This year 2022, new Rainfall Normal is implemented based on the station-wise rainfall records for the period from 1971-2020 for operational use. It is noted that the previous rainfall normal was based on the records for the period 1961-2010 till last year (2021). Rainfall Normal have been computed using the daily rainfall records of 50 years (1971-2020) of a network of 4311 Stations all over the India. The spatial distribution of the DRMS raingauge network which was used in computation of normal rainfall have been depicted in Figure 1.

The long period average (LPA) of winter, pre-monsoon, southwest monsoon and post monsoon rainfall are 39.8 cm, 130.5 cm, 868.5 cm and 121 cm respectively. The LPA of annual rainfall is 116 cm, but it is highly variable in spatial and temporal scale. The areas on the Western Ghats and the Sub-Himalayan areas in North East and Meghalaya Hills receive heavy rainfall of over 250 cm annually, whereas the Areas of Northern parts of Kashmir and Western Rajasthan receive rainfall less than 40 cm. The temporal distribution of LPA rainfall over the four seasons viz., winter (Jan-Feb), pre-monsoon (March to May), southwest monsoon (June to September) and post monsoon (October to December) are 3, 11, 75 and 11% respectively. So, most of the rainfall received in the four rainy months, June to September.

The operational near realtime rainfall statistics is provided on daily, weekly, monthly, 4 seasons i.e. Winter (Jan-Feb), Pre-Monsoon (Mar-May), Southwest (SW) Monsoon (Jun-Sep) and Post-Monsoon (Oct-Dec), and on annual basis.

## 2. METHODOLOGY

The rainfall statistics is computed based on the receipt of rainfall data from about 5600 stations spread over the entire country. Based on daily rainfall data of these stations, the rainfall of all the districts are computed and using the rainfall of the districts, rainfall statistics for the Meteorological (Met.) Subdivisions, states where as using met sub-division rainfall data the four broad regions and for the whole country have been prepared. The present publication includes the updated rainfall statistics for the country as a whole, for all the four broad regions of India, 36 Met. Subdivisions, all States and UTs and 703 Districts of India. The statistics is provided on monthly, 4 seasons i.e. Winter (Jan-Feb), Pre-Monsoon (Mar-May), Southwest (SW) Monsoon (Jun-Sep) and Post-Monsoon (Oct-Dec), and on annual basis.

2.1 Generation of Rainfall Statistics (District/Subdivision/state/Country and four homogenous regions)

a. District rainfall

It is calculated by Arithmetic Mean Method as follows:

$$P_{\text{Dist}} = \sum P_i / N$$

$P_{\text{Dist}}$  is the district wise average precipitation

$\sum P_i$  is arithmetic sum of the rainfall of all the stations falling in a district, N is the total number of stations in that district.

<u>Subdivision/State</u> <u>Rainfall (mm.)</u>		Rainfall for a given period of time		
		District Rainfall (mm.) for given the period	District Area (Sq. Km.)	Rainfall x Area
DISTRICTS	Dist. 1	$r_1$	$a_1$	$r_1 \times a_1$
	Dist. 2	$r_2$	$a_2$	$r_2 \times a_2$
	Dist. 3	$r_3$	$a_3$	$r_3 \times a_3$
	...	...	...	...
	...	...	...	...
	...	...	...	...
	...	...	...	...
	...	...	...	...
	Dist. (n)	...	...	...
TOTAL		SUM1	SUM2	

- b. District Rainfall for 'n' No. of days = Avg.1+Avg.2+Avg.3+ ... +...+...+Avg.(n)  
 c. For both Subdivision and State, the Area weighted estimate of rainfall for both is made by taking Area Weighted Average Rainfall of Districts of within the sub Division and Area weighted average rainfall of the districts within the state.

$$P_{\text{subdivision/state}} = (P_{\text{Dist-1}} \times A_{\text{Dist-1}} + P_{\text{Dist-2}} \times A_{\text{Dist-2}} + \dots + P_{\text{Dist-n}} \times A_{\text{Dist-n}}) / A_{\text{subdivision/state}}$$

- d. The rainfall summary for country as whole is compiled as area weighted average rainfall of met sub-Divisions in similar way.

$$P_{\text{Country}} = \sum (P_{\text{subdivision}} \times A_{\text{subdivision}}) / A_{\text{Country}}$$

- e. The rainfall summary for the four homogenous regions is compiled as area weighted average rainfall of met sub-Divisions in similar way.

$$P_{\text{homogenous}} = \sum (P_{\text{subdivision}} \times A_{\text{subdivision}}) / A_{\text{homogenous}}$$

Where,  $A_{\text{homogenous}}$  = sum of the area of the subdivisions in the homogenous region.

Percent departure of rainfall from Rainfall Normal, besides these statistics, have been color coded as per their categories. The list of categories, their corresponding ranges and color codes is given in Table 1.

**Table 1. The list of categories, their corresponding ranges and color codes**

Category	Departure from Normals	Colour Code
<b>Large Excess (LE)</b>	60% or more	
<b>Excess (E)</b>	20% to 59%	
<b>Normal (N)</b>	-19% to +19%	
<b>Deficient (D)</b>	-20% to -59%	
<b>Large Deficient (LD)</b>	-60% to -99%	
<b>No Rain</b>	-100%	
<b>No Data</b>	Data Not Available	

### 3. RAINFALL STATISTICS FOR THE FOUR HOMOGENIOUS BROAD REGIONS & COUNTRY IN THE YEAR 2022

#### 3.1 SEASONAL & ANNUAL

The region-wise and the country's seasonal and annual actual observed rainfall are given at Table 2, and the percentage departure from normal rainfall are given at Table 3. There is no negative departure of rainfall observed in the four season and consequently annually. The country received annual rainfall of 108% (1257mm) of its normal rainfall of **1160 mm** and during southwest monsoon season, 106% (924.8 mm) of its normal rainfall of **868.5 mm**. During winter the country received good amount of rainfall with compare to LPA rainfall of winter which 147% (58.5mm). It is observed that four homogeneous regions as well as the country as a whole received more than LPA rainfall in winter. During southwest Monsoon season, lowest rainfall deficiency (-18%) observed over East & North East India, where as maximum 22% departure observed over south peninsula.

**Table 2: Region-wise seasonal and annual rainfall (mm) - Year 2022**

REGIONS	WINTER	PRE-MONSOON	SW MONSOON	POST-MONSOON	ANNUAL
COUNTRY AS A WHOLE	<b>58.5</b>	<b>130.2</b>	<b>924.8</b>	<b>144.1</b>	<b>1257.0</b>

NORTH WEST INDIA	<b>37%</b>	<b>-63%</b>	<b>1%</b>	<b>57%</b>	<b>-1%</b>
CENTRAL INDIA	<b>78%</b>	<b>-37%</b>	<b>19%</b>	<b>25%</b>	<b>18%</b>
SOUTH PENINSULA	<b>54%</b>	<b>63%</b>	<b>22%</b>	<b>9%</b>	<b>24%</b>
EAST & NORTH EAST INDIA	<b>55%</b>	<b>19%</b>	<b>-18%</b>	<b>11%</b>	<b>-7%</b>

#### 3.2 MONTHLY RAINFALL

The observed monthly rainfall for the country as a whole and also for the four broad regions of the country are given at Table 4 and the % departure from normal rainfall are given at Table 5. The country received maximum rainfall in the month of July as 327.2 mm and minimum in the month of March as 8.9 mm. However, on comparing with normal values, it is observed that the maximum positive departure is of 48% from its normal rainfall in the month

of October whereas the maximum negative departure of rainfall was of 70% in the month of March country as whole. While, looking at the regions of the country, it may be observed that, maximum positive departure of 198% was recorded in North West India in the month of October, whereas the maximum negative departure was of 57% in the month of April in Central India. The highest area weighted rainfall of 457.7 mm was recorded in the month of July in Central India and the least rainfall recorded was 0.4 mm in the month of November in both Central India and East & North East India.

**Table 4: Region-wise actual monthly rainfall (mm) - Year 2022**

REGIONS	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC

### 3.3 SOUTHWEST MONSOON – 2022

The rainfall statistics for southwest monsoon months and season for the country is given at Table 6. Also, the monthly (JJAS) & southwest monsoon observed and its normal rainfall is given at Figure 2 and the % departure of observed rainfall from their normal rainfall have been depicted Figure 3. During the southwest monsoon season, whole country was at 6% departure from Normal. The departure of country rainfall from LPA of southwest monsoon was 6%. The negative departure of rainfall from LPA for June month's rainfall was 8% whereas remaining month-wise July, August and September were shown positive departure of rainfall values of 17% and 4% and 8% respectively.

**Table 6: Rainfall (mm) for the country: southwest monsoon Season - 2022**

MONTH	OBSERVED	NORMAL	% DEPARTURE FROM NORMAL
JUNE	152.2	165.3	-8%
JULY	327.2	280.5	17%
AUGUST	264.0	254.9	4%
SEPTEMBER	181.4	167.9	8%
SW MONSOON	924.8	868.6	6%

Figure 2: All India Rainfall – SW Monsoon 2022

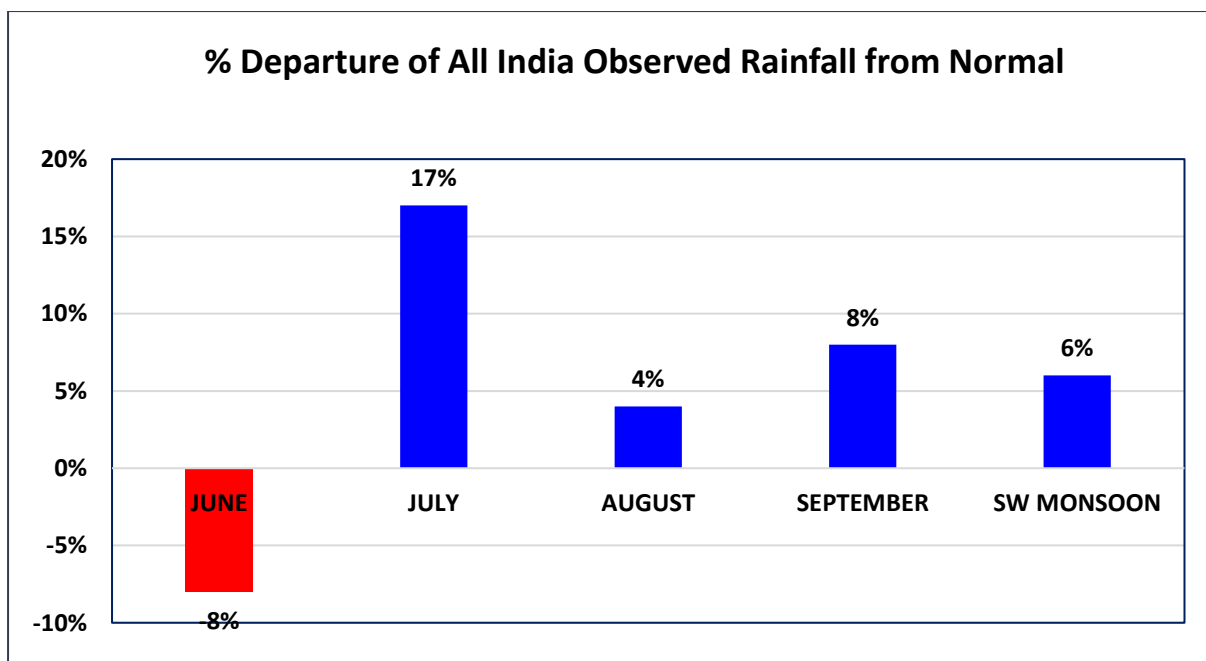

Figure 3: Percent Departure of All India Rainfall – SW Monsoon 2022

### 3.4 DAILY RAINFALL SERIES FOR THE FOUR HOMOGENIOUS BROAD REGIONS & COUNTRY DURING SOUTHWEST MONSOON

Realtime daily rainfall (in mm) and its long term (1971-2020) normal value for the country as a whole and for the four homogeneous regions during 1 June to 30 September are shown in figures 4 to 8. The temporal distribution of southwest monsoon rainfall for the country and homogeneous regions (figs. 4 to 8) show that the rainfall was well distributed during the season except the initial first half in the month June.

Figure 4: All India Rainfall - southwest monsoon Rainfall Distribution – 2022

Figure 6: Central India - southwest monsoon Rainfall Distribution - 2022

Figure 7: South Peninsula - southwest monsoon Rainfall Distribution - 2022

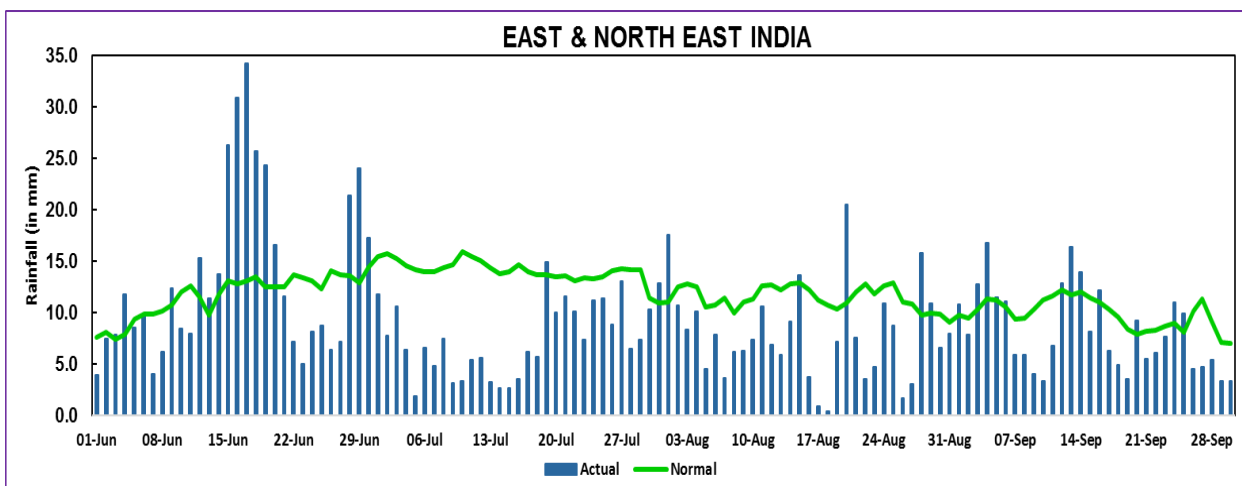

Figure 8: East & North East India - southwest monsoon Rainfall Distribution - 2022

## 4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

### 4.1 SEASONAL & ANNUAL

Seasonal and annual observed rainfall statistics during the year 2022 for all the 36 Met. Subdivisions and percent departure of rainfall from normal values have been given in Table 7 & 8. It may be observed from annual rainfall that Coastal Karnataka received highest rainfall of 3763.2 mm and West Rajasthan received lowest rainfall of 483.2 mm. During the southwest monsoon season, Coastal Karnataka received highest rainfall of 3235.4 mm and Punjab received lowest rainfall of 414.0 mm.

On comparing the observed annual rainfall with LPA of annual, it may be observed that, most of the Met. Subdivisions remained either in Excess or in Normal rainfall category except for 3 Met. Subdivisions namely NMMT, Gangetic West Bengal, Bihar where is was under Deficient category. Annually none of the Met. Subdivisions remained in Large Excess or Large Deficient category.

During SW Monsoon season also, no Met. Subdivision remained either in Large Excess or in Large Deficient rainfall category. 6 Met. Subdivision remained in Deficient rainfall category i.e., Gangetic West Bengal, NMMT, Jharkhand, Bihar, East and West Uttar Pradesh. During southwest monsoon season and annually, none of the 36 Met. Subdivisions recorded the rainfall that is less than 31% of its normal, with highest deficiency in rainfall of 31% and 23% in Bihar during southwest Monsoon and annual respectively.

**Table 7: Met. Subdivision-wise seasonal and annual rainfall (mm) - Year 2022**

## 4.2 CATEGORY-WISE SEASONAL AND ANNUAL

Annual rainfall statistics for the year 2022 show that, 13 Met. Subdivisions remained in Excess and 20 in Normal category of rainfall while 3 Met. Subdivision remained in Deficient category of rainfall. No Met sub-division received Large Excess category of rainfall. The category wise no. of met sub division statistics and chart for seasonal distribution of no. of Met. Subdivisions have been given in Table 10 and Figure 9 respectively.

Table 10: Category wise number of Met. Subdivisions - seasonally and annually

CATEGORY	WINTER	PRE-MONSOON	SW MONSOON	POST-MONSOON	ANNUAL
L. EXCESS	19	7	0	6	0
EXCESS	6	3	12	10	13
NORMAL	3	9	18	14	20
DEFICIENT	3	9	6	4	3
L. DEFICIENT	5	8	0	2	0
NO RAIN	0	0	0	0	0
NO DATA	0	0	0	0	0

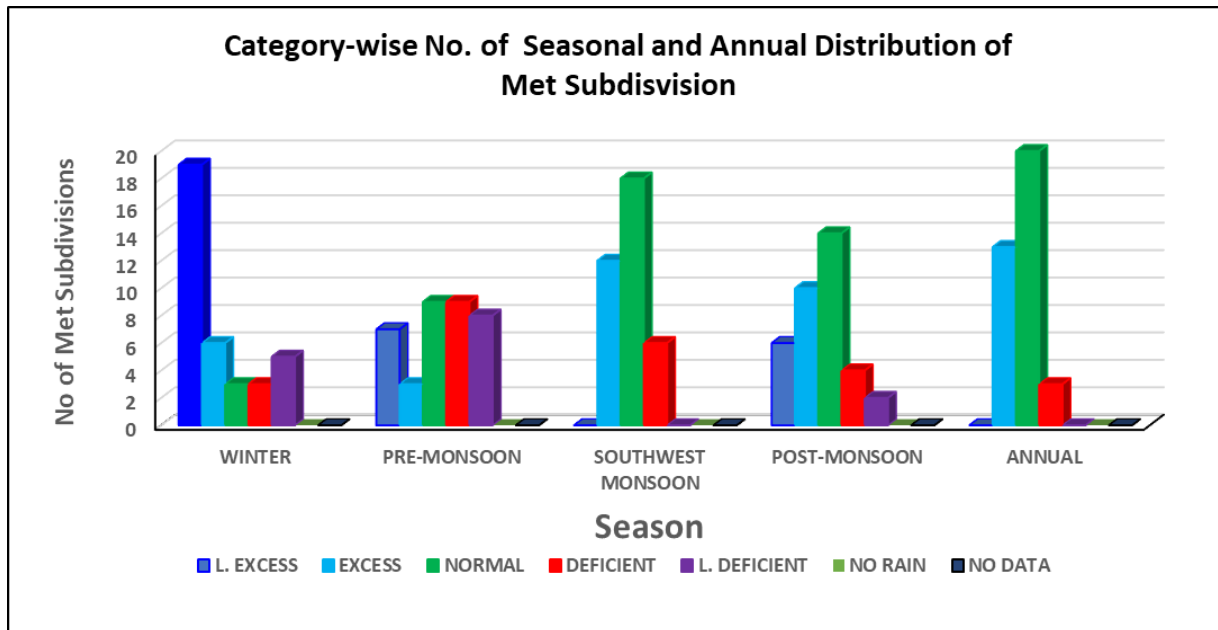

Figure 9: Category-wise Met. Subdivisions – seasonally and annually

Percent distribution of Met. Subdivisional area of the country under different categories in the four seasons and for the year has been depicted in Figure 10.

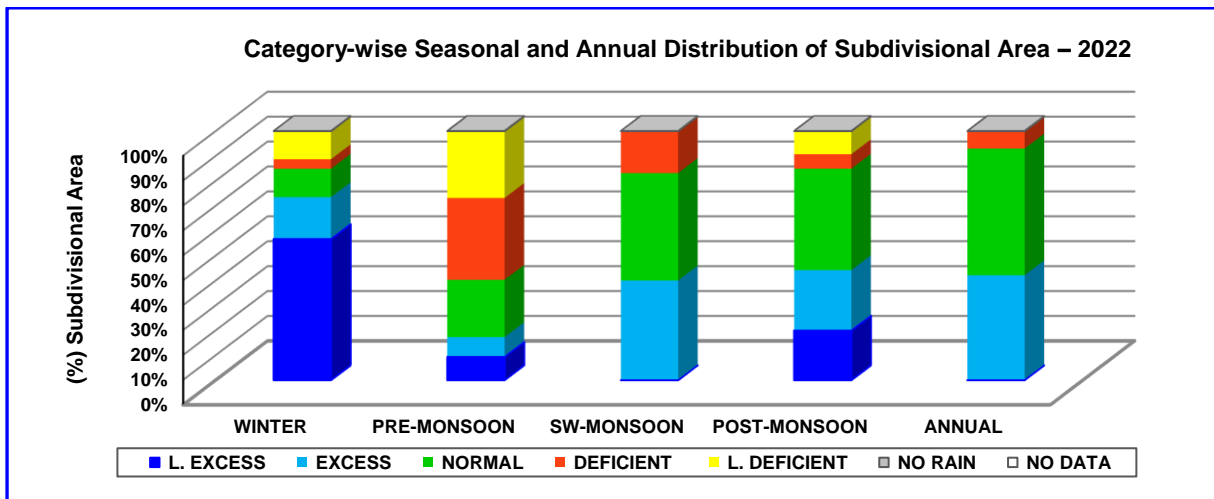

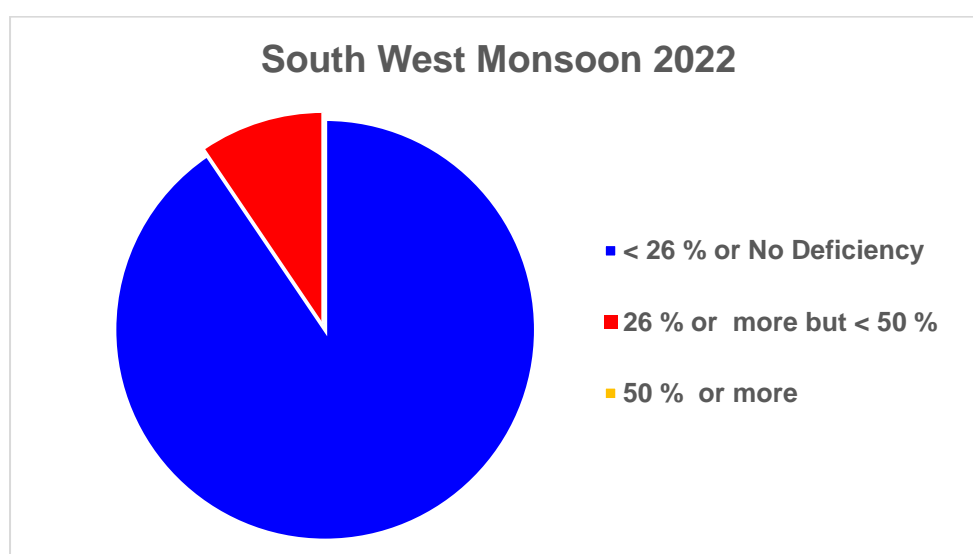

Figure 10: % Area of the Met. Subdivisions under different rainfall categories- Seasonal & Annual - 2022

### 4.3 AREA (%) UNDER RAINFALL DEFICIENCY– SW Monsoon 2022

Area (%) of the 36 Met. Subdivisions of India under different categories of rainfall deficiency during SW Monsoon (June-September) have been given below in tabular form in Table 11 and has been depicted in graphical form in Figure 12 as well.

**Table 11: Met. Subdivisional Area (%) under Rainfall Deficiency – SW Monsoon 2022**

Deficiency in Rainfall	Deficiency	% Area of Met. Subdivisions of India
< 26 %	No	91%
26 % or more but < 50 %	Moderate	9%
50 % or more	Severe	0%

**Figure 12: Met. Subdivisional Area (%) under Rainfall Deficiency – SW Monsoon 2022**

### 4.4 ANNUAL & SEASONAL RAINFALL MAPS

Met. Sub division-wise rainfall maps for the year 2022 and for the four seasons depicting the observed and normal rainfall values along with their percentage departure from normal values with defined colors for different categories are given below at Figure 13 to Figure 17.

The normal rainfall values are shown in Bold figures on the map whereas the actual rainfall values are shown in small figures. Percentage departure of rainfall are shown within the brackets.

## 4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

It may be observed (Table 13) that in the month of January, 29 out of the 36 Met. Subdivisions received Normal/Excess / Large Excess category of rainfall and 7 remained in Deficient/Large Deficient category. In the month of November, 32 no. of Met Sub divisions received Deficient/Large Deficient/ No Rain category of rainfall.

#### 4.6 CATEGORY-WISE MONTHLY DISTRIBUTION

The statistics and chart for monthly distribution of no. of Met. Subdivisions in different categories are given below in Table 14 and Figure 18 respectively.

It can be seen (Table 14) that 24 Met. Subdivisions received with Large Excess category of rainfall in the month of January. Also, no rain category of rainfall was observed in some met sub divisions in the months of February, March, April, November and December. The maximum no. of met sub divisions observed in the excess, normal, deficient and Large deficient categories of rainfall are 12, 17, 20, 19 in the months of September, September, June and March respectively.

**Table 14: Category wise monthly number of Met. Subdivisions - Year 2022**

Category	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
L. EXCESS	24	7	2	9	11	2	10	4	3	12	1	6

### 4.7 MONTHLY RAINFALL MAPS

Met. Subdivision-wise rainfall maps depicting the monthly observed and normal rainfall, percent departure from the normal rainfall shaded with category-wise defined colors have been given at Figure 19 to Figure 30. Bold figures on the map are the normal rainfall values whereas small figures indicate the actual rainfall. Percentage departures of rainfall are shown within the brackets.

## 5. STATE-WISE RAINFALL STATISTICS

### 5.1 SEASONAL & ANNUAL

State-wise seasonal and annual observed rainfall, and its percentage departure from normal rainfall for the states have been given in Table 15. It is observed that during annual, the highest area weighted rainfall of 4216.1 mm was received at Meghalaya and the lowest rainfall of 86.8 mm was received at Ladakh (UT).

**Table 15: State-wise Seasonal and Annual Rainfall (mm) - Year 2022**

STATES	Winter	Pre-Monsoon	SW-Monsoon	Post-Monsoon	Annual
<b>EAST &amp; NORTH EAST INDIA</b>					
ARUNACHAL PRADESH	132.8	838.2	1430.3	359.4	2810.6
ASSAM	75.8	760.9	1340.5	198.5	2375.7

## 5.2 CATEGORY-WISE SEASONAL AND ANNUAL DISTRIBUTION:

The distribution of categories in Annual rainfall statistics show that 11 state in Large Excess/Excess, 21 states remained in Normal and only 4 in deficient category of rainfall. The statistics and chart depicting the number of states in different categories for different seasons and for the year have been given at Table 17 and Figure 67 respectively.

Table 17: Category-wise Number of States - Seasonally and Annually - Year 2022

CATEGORY	WINTER	PRE-MONSOON	SW MONSOON	POST-MONSOON	ANNUAL
LARGE EXCESS	21	7	1	8	1
EXCESS	6	5	9	5	10
NORMAL	4	8	20	14	21
DEFICIENT	4	9	6	9	4
LARGE DEFICIENT	1	7	0	0	0
NO RAIN	0	0	0	0	0
NO DATA	0	0	0	0	0

Figure 67: Category-wise distribution of States – Seasonally and Annually

Percent distributions of area of the states of the country under different categories in the four seasons and for the year have been depicted in Figure 68.

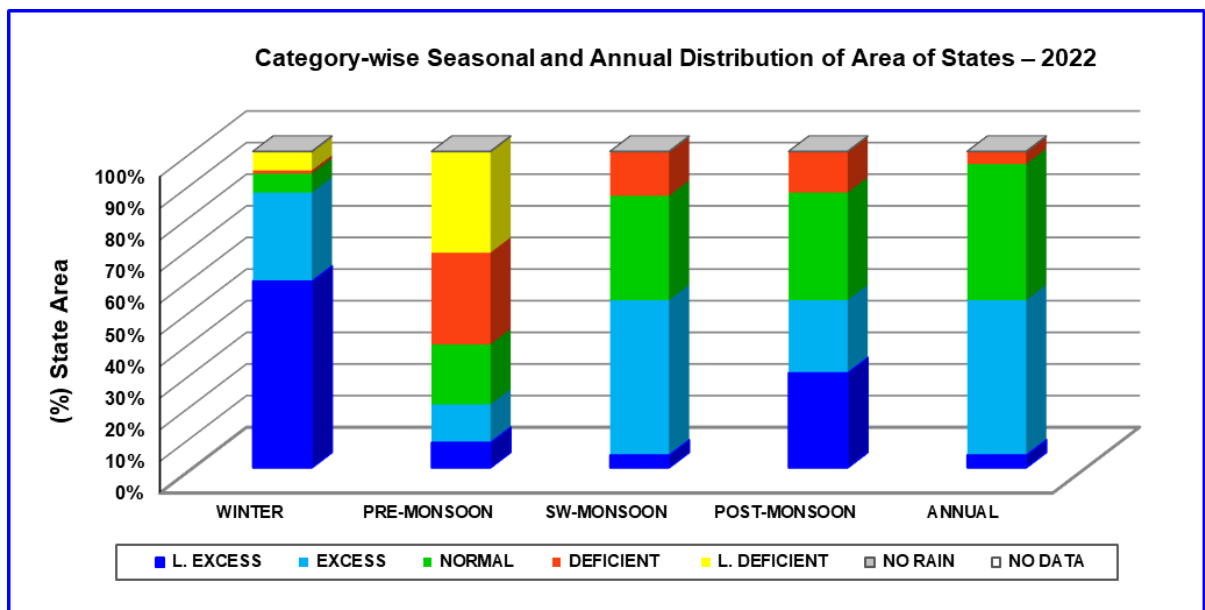

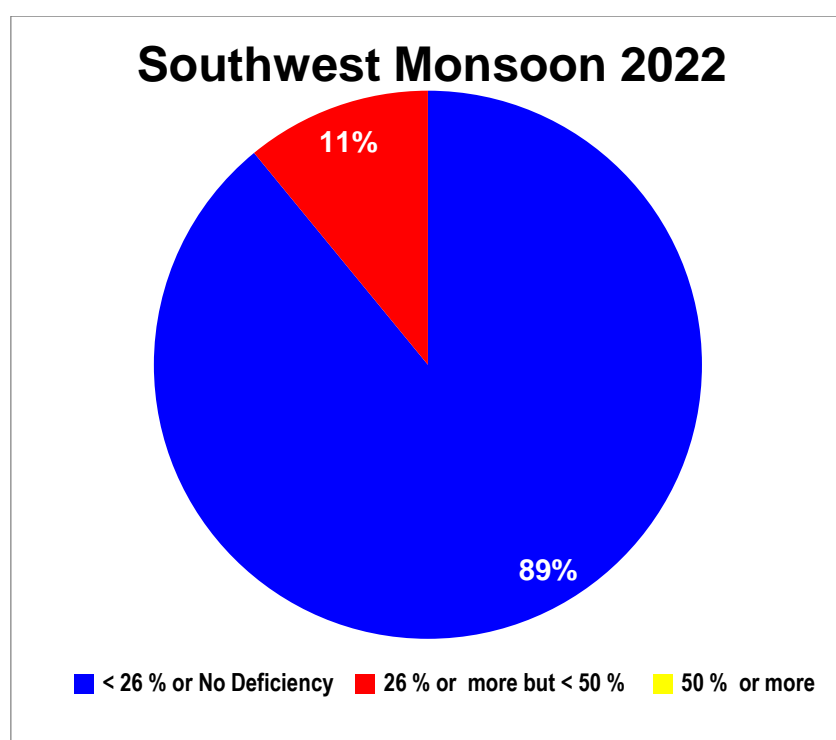

Figure 68: % Area of the country under different categories – Seasonally & Annually

### 5.3 AREA (%) UNDER RAINFALL DEFICIENCY– SOUTHWEST MONSOON

Area (%) of the 36 states and UTs of the country under different categories of rainfall deficiency during southwest monsoon have been given below in tabular form in Table 18 and has been depicted in graphical form in Figure 69 as well. During southwest monsoon season, 11% area of States of the country experienced rainfall deficiency of 26% or more, but <50%.

**Table 18: Area (%) of States of the country under Rainfall Deficiency – SW Monsoon 2022**

Deficiency in Rainfall	Deficiency	% Area of States of Country
25 % or less	No	89%
26 % or more but < 50 %	Moderate	11%
50 % or more	Severe	0%

**Figure 69: Area (%) of States under Rainfall Deficiency – Southwest Monsoon**

### 5.4 MONTHLY RAINFALL STATISTICS

State-wise monthly observed rainfall (mm) for the states have been given in Table 19. During SW Monsoon season, monthly highest rainfall occurred 1824.7 mm over the state of Dadra & Nagar Haveli and Daman & Diu (UT) in the month of July and also many states observed no rainfall in different months in winter, pre-monsoon, and in post monsoon seasons viz., Tripura, Jharkhand, Bihar, Uttar Pradesh, Chandigarh (UT), Delhi, Gujarat, Dadra & Nagar Haveli and Daman & Diu (UT), Goa and Chhattisgarh, not in southwest monsoon season.

State-wise monthly percentage departure of monthly rainfall for the states from their normal rainfall have been given in Table 20. It is observed that in the month of November, all the state/UTs remained in Deficient/ Large Deficient/ No Rain category of rainfall (except Himachal Pradesh, Jammu &

## STATE-WISE RAINFALL STATISTICS

Kashmir (UT), Ladakh (UT), Tamilnadu, Puducherry (UT) and Kerala remained Large Excess/ Excess/Normal). The similar situation like Deficient/ Large Deficient/ No Rain category of rainfall was also persists in the month of December as well (except for Nagaland, Manipur, Ladakh (UT), Goa, A & N Island (UT), Andhra Pradesh, Telangana, Tamilnadu, Karnataka, Kerala and Lakshadweep (UT) remained Large Excess/ Excess categories of rainfall).

### 5.5 MONTHLY CATEGORY-WISE DISTRIBUTION:

The statistics and chart depicting the monthly distribution of number of states in different categories during the year have been given at Table 21 and Figure 70 respectively. It may be observed that at least 11 or more number of states remained in Large Excess/ Excess/ Normal rainfall category of rainfall during most of the months during the year except in month of March and November when the number states in these categories were 8 and 6 respectively.

14 or more number of states observed Deficient/Large Deficient /No Rain category of rainfall during the months of February, March, April, June, August, November and December.

**Table 21: Category-wise Number of States - Monthly - Year 2022**

## 6. DISTRICT-WISE RAINFALL STATISTICS

### 6.1 SEASONAL & ANNUAL

The rainfall statistics for 703 districts of India was prepared during the year 2022. The district-wise observed seasonal and annual rainfall for the districts whose data are received throughout the year is given in Table 23. Also, the percent departures of observed rainfall from their normal have been given in Table 24. It may be seen that the rainfall for some of the districts are not available, which is due to non-availability of data either by sudden developments of faults in the instruments or by remote/difficult locations of the stations in the districts. Annually, the District of East Khasi Hills in Meghalaya received the highest rainfall of 8084.7 mm whereas the District Ladakh(Leh) in Ladakh(UT) received the lowest rainfall of 63.8 mm, which resembles with the normal pattern of rainfall in India.

**Table 23: District-wise seasonal and annual Rainfall (mm) - Year 2022**

## 6.2 CATEGORYWISE SEASONAL AND ANNUAL DISTRIBUTION OF DISTRICT RAINFALL

The category-wise seasonal and annual distribution of no. of districts of India has been given in Table 24 and a chart depicting the distribution is also given at Figure 107. It may be observed that in southwest monsoon and annually, 568 no. of districts out of the 703 districts experienced large excess/ Excess/Normal category of rainfall. Annually and during southwest monsoon season only 4 & 7 no. of districts remained in Large Deficient category of rainfall respectively. During Winter, Pre-Monsoon and Post-monsoon seasons, the number of No Rain category of rainfall districts were 37, 43 and 6 respectively.

Table 24: Category-wise Number of Districts - Seasonally and Annually - Year 2022

CATEGORY	WINTER	PRE-MONSOON	MONSOON	POST-MONSOON	ANNUAL
L. EXCESS	343	91	54	190	43
EXCESS	116	82	173	123	183
NORMAL	97	143	279	217	342
DEFICIENT	54	203	190	123	125
L. DEFICIENT	52	138	7	42	4
NO RAIN	37	43	0	6	0
NO DATA	4	3	0	2	6

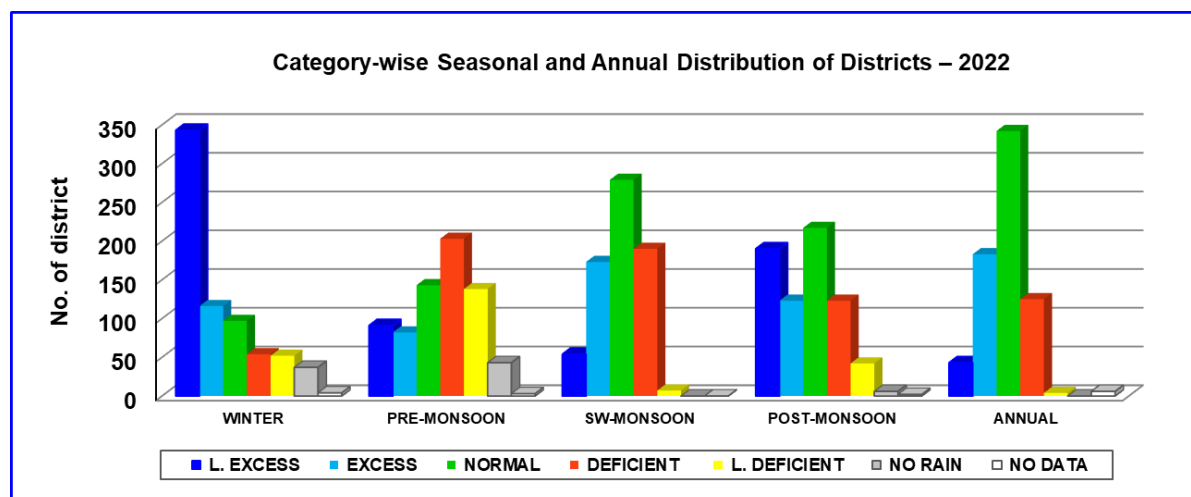

Figure 107: Categorywise Seasonal and Annual Distribution of No. of Districts – 2022

Distribution of districts of India in terms of their areas under different categories in the four seasons and for the year 2022 has been depicted in Figure 108.

Figure 108: Category-wise distribution of Area of Districts – Seasonally and Annually – Year 2022

### 6.3 RAINFALL DEFICIENCY – SW Monsoon 2022

Area (%) of the districts of India during SW monsoon (June-September) under different categories of rainfall deficiency have been given below in tabular form in Table 25 and has been depicted in graphical form in Figure 108 as well.

Table 25: Area (%) of Districts of the country under Rainfall Deficiency - Monsoon 2022

Deficiency in Rainfall	% Area of Districts of India
< 26 % or No deficiency	86%
26 % or more but < 50 %	11%
50 % or more	3%

It may be observed from Figures 12, 69 and 108 that more realistic distribution of area in different ranges of rainfall received is obtained when we consider smaller units of administrative boundaries like district than the met-subdivision or the state. In all, it may be seen that 3% area of districts of the country exhibit 50% or more deficiency in rainfall where as 86% area of districts of the country that recorded no deficiency in rainfall. Remaining 3% area of the country observed 26% or less deficient of rainfall during the South-West Monsoon season.

Figure 108: Area (%) of Districts under Rainfall Deficiency – SW Monsoon 2022

## 6.4 MONTHLY RAINFALL STATISTICS

The district-wise observed monthly rainfall is given in Table 27. Also, the percent departures of observed monthly rainfall from their normal have been given in Table 28. The rainfall statistics in respect of the districts whose data is not available throughout the year have not been included in these tables.

**Table 27: District-wise Monthly Rainfall (mm) – Year 2022**

## **7. ANNUAL AND MONSOON RAINFALL FROM 2000 TO 2022**

The annual and monsoon rainfall and their departures from normal rainfall from the years 2000 to 2022 are shown in Table 30 and Figure 86 through Figure 89. During last 23 years, the

country received annual rainfall of 10% or less of its normal rainfall. It was with positive departures including zero departure only during 8 years and in rest of the years, it was with negative departures. During the years 2000, 2002, 2009, 2012, 2014 and 2018 the rainfall departures were more than 10% towards negative side. The maximum negative departure was 21% in the year 2002. Year 2019 witnessed highest area weighted rainfall of 1288.8 mm (+10% of LPA) mm since 2000.

**Table 30: SW Monsoon and Annual Rainfall (2000-2022)**

YEAR	SW – MONSOON RAINFALL (mm)		ANNUAL RAINFALL (mm)	
	RAINFALL	% DEPARTURE	RAINFALL	% DEPARTURE
2000	798.1	-10%	1035.4	-13%
2001	818.8	-8%	1100.7	-7%

**Figure 86: Annual Rainfall 2000-2022**

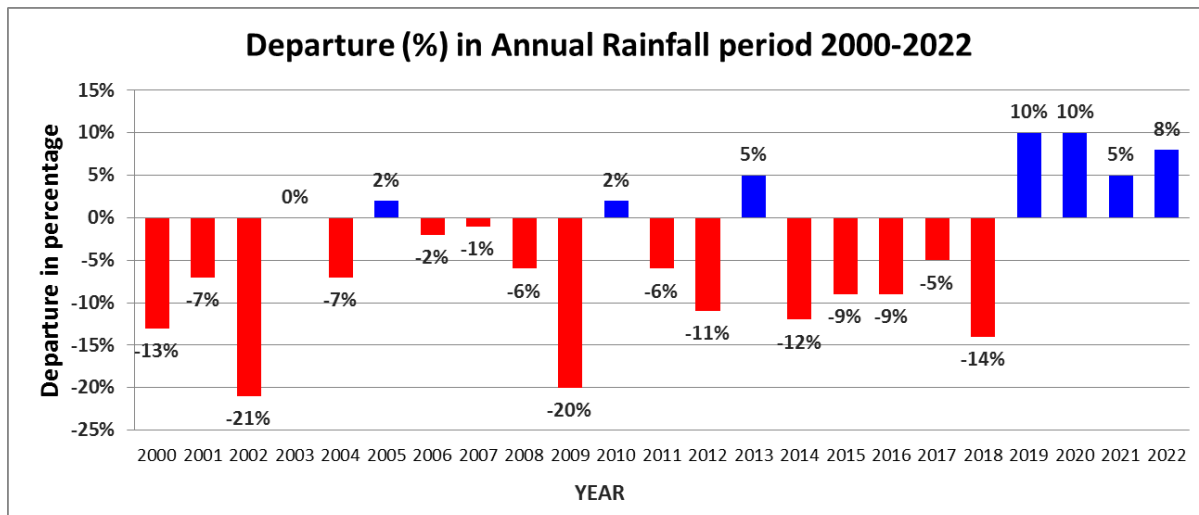

Figure 87: % Departures of Annual Rainfall 2000 – 2022

During last 23 years, the country received Monsoon rainfall of 21% less from its normal rainfall in the year 2002. Southwest Monsoon Rainfall has also recorded highest rainfall of 971.0 mm (+10% of LPA) in the year 2019 since 2000.

Figure 88: SW Monsoon Rainfall 2000-2022

Figure 89: % Departures of SW Monsoon Rainfall 2000 – 2022

## **8. SALIENT FEATURES OF RAINFALL DURING 2022**

1. The country received actual annual rainfall of 1257.0 mm which was 108% of its long period average (LPA) rainfall.
2. The country received actual SW Monsoon season (June to September) rainfall of 924.8 mm which was also 106% of its long period average (LPA) rainfall.
3. The rainfall for the country as whole during Winter, Pre-monsoon and Post monsoon were 58.5 mm, 130.2 mm & 144.1 mm which was 147%, 100% & 119% of LPA respectively.
4. Rainfall distribution during SW Monsoon season:
  - a. Region Wise: North West India, Central India, South Peninsula, East & North East India received actual rainfall of 594.3 mm, 1160.4 mm, 874.6 mm, 1126.7 mm which was 101%, 119%, 122%, 82% of LPA respectively.
  - b. Month Wise: The actual rainfall for the country as a whole during June, July, August & September was 152.2 mm, 327.2 mm, 264.0 mm, 181.4 mm which was 92%, 117%, 104% and 108% of LPA respectively.
  - c. Met Sub Division Wise:
    - i. Out of 36 met sub divisions, 12 met sub divisions received Excess rainfall, 18 met sub divisions received Normal rainfall and 6 met sub divisions received Deficient rainfall.
    - ii. Based on met sub division wise rainfall, 40% area received Excess rainfall, 43% area received Normal rainfall and 17% area received deficient rainfall.
  - d. District Wise: Out of 703 districts for which rainfall statistics was prepared, 54 districts received Large Excess rainfall, 173 districts received Excess rainfall, 279 districts received Normal category of rainfall, 190 districts received Deficient rainfall, 7 districts received Large Deficient rainfall.
5. In the four meteorological homogeneous regions, highest positive departure of 78% was experienced in Central India during winter season.
6. Annual and seasonal rainfall was at least equal or more than the normal value for the country as a whole. Also, all the four homogeneous regions, annual rainfall is more than the normal value except North West India and Central India in Pre-monsoon season, East & North East India in southwest monsoon season. Annually for North West and East & North East India were less than the normal value.
7. Month wise, maximum positive departure of 207% was recorded in Central India in the month of January, whereas the maximum negative departure of 98% was recorded in the month of November in East & North East India.
8. Met sub-division-wise Annual and Seasonal rainfall distribution:

- a. Annual: Coastal Karnataka received highest rainfall of 3763.2 mm and West Rajasthan received lowest annual rainfall of 483.2 mm.
- b. SW Monsoon season:
  - i. Coastal Karnataka received highest rainfall of 3235.4 mm and Punjab received lowest rainfall of 414.0 mm.
  - ii. Bihar recorded highest deficiency of 31% whereas highest positive departure of 58% was recorded in West Rajasthan.
9. Annually, the District of East Khasi Hills in Meghalaya received the highest rainfall of 8084.7 mm whereas the District Ladakh (Leh) in Ladakh (UT) received the lowest rainfall of 63.8 mm.
