Foreword

In its continuous endeavor to provide detailed analytical report on the realized updated Rainfall distribution in various temporal and Spatial domain, Hydromet Division of India Meteorological Department has prepared an annual report entitled 'Rainfall Statistics of India – 2021'. The report has been painstakingly compiled using the station level rainfall data from more than 5100 DRMS stations.

Real-time monitoring of rainfall is a very important activity of IMD. The real-time rainfall products are very useful inputs for the benefit of society as well as to the weather forecasters. The report contains the detailed rainfall information in monthly, seasonal and annual scale for the districts, states, met sub divisions, four homogeneous regions and for the country. The Rainfall performance is tabulated in terms of its departures from its normal (1961-2010). The products available in both tabular, graphical format in addition to the thematic maps provides a lucid description for easy comprehension. This report also has tabulation of date wise extreme rainfall events (rainfall => 21 cm). This publication is very important for the Policy Makers, Agriculturists, Planners, Research Scholars, flood forecasters and many more.

This report is an outcome of sincere and consistent effort of all the team members of Hydromet Division, IMD. I take this opportunity to express my appreciation to Dr. M. Mohapatra, DGM, Shri B. P. Yadav, Head, Hydromet Division and their team of scientist and staff for putting their best efforts in bringing out this valuable publication successfully.

Preface

The rainfall over India varies from arid to semi-arid regions in the West to the extreme precipitation region in the Northeast. The Climatic variation of the region is manifested in the pan-India rainfall distribution. While Indian sub-continent experiences predominantly two Monsoon seasons, the rainfall during southwest monsoon season (June to September) has greater significance for India's Economy, especially in agriculture sector. The study of precipitation distribution and trends is critically important considering the dependence of food security and economy on the timely availability of water.

The spatial and temporal variability of rainfall in the country leads to flood and drought every year in one or the other part of the country. Rainfall statistics is therefore required by the Policy Makers, Planners, Design Structure Engineers, Agriculturists, Hydrologists, Research Scholars and many more for proper management of water resources and its efficient use. Keeping in view the usefulness of rainfall statistics, the publication of rainfall statistics on annual basis was started 2012 onwards. The current near real-time rainfall products are uploaded on IMD website at <http://hydro.imd.gov.in/hydrometweb/>. The updated and compiled statistics is prepared including additional data received late. Hope, this updated publication on rainfall statistics for the year 2021 would be useful for the various stakeholders.

It gives me immense pleasure to present the 'Rainfall Statistics of India – 2021' and I appreciate the authors for their efforts in bringing out this publication. I thank and appreciate my colleagues in Hydrometeorology Division of IMD, New Delhi including Mr BP Yadav, Sc-F & Head Hydrometeorology, Mr Rahul Saxena, Sc-F, Dr Ashok Kumar Das, Sc-E, Shri Davinder Sharma, Shri Rameshwar Ram, Shri Ashok Kumar, Smt. Malini Thakur, Shri P.K. Panchal and Smt. Sushma Singh for their whole-hearted effort in bringing out this publication.

(DR. M. MOHAPATRA)

Preface

India Meteorological Department is using the rainfall data received from a network of more than 5100 rain-gauge stations which are under District wise Rainfall Monitoring Scheme (DRMS) on near real time basis and prepares the rainfall statistics, both in tabular as well as in map/graphical form. The statistics is prepared for the administrative zones like districts, states and for the country. The statistics is also prepared for the 36 Meteorological Subdivisions and for the four broad regions (North West India, Central India, South Peninsula and, North & North East) of India. The rainfall is prepared at various temporal scales viz., weekly, monthly, seasonal and annual basis. Besides this, the hydromet division of IMD also monitors the Meteorological Subdivisional rainfall on daily basis during the Southwest Monsoon season for the whole country and during Northeast Monsoon (Post-Monsoon) season for South Peninsula Region. Although, the current real-time rainfall products are uploaded on IMD website at <http://hydro.imd.gov.in/hydrometweb/>, updated statistics is in most demand by various users as it is included additional late receiving station's data in updating the statistics. Hope, this publication containing updated rainfall statistics for the year 2021 would be useful for the various stakeholders.

We are thankful to Davinder Sharma, Rameshwar Ram, Ashok Kumar, Smt. Malini Thakur, P.K. Panchal and Smt. Sushma Singh of Hydromet Division, New Delhi for their whole-hearted contribution in bringing out this publication.

1. INTRODUCTION

Rainfall is highly variable in time and space. Over 75% of the annual rainfall is received in the four rainy months for June to September only thereby leading to large variations on temporal scale. The average annual rainfall is 119 cm, but it has great spatial variations. The areas on the Western Ghats and the Sub-Himalayan areas in North East and Meghalaya Hills receive heavy rainfall of over 250 cm annually, whereas the Areas of Northern parts of Kashmir and Western Rajasthan receive rainfall less than 40 cm.

The network of observatories used in the calculation of the seasonal normal rainfall have been depicted in Figure 1. Rainfall Normal have been computed using rainfall records of 50 years (1961-2010) of a network of around 4200 Stations all over the India. The two significant features of India's rainfall are that, in the north India, rainfall decreases westwards and in the Peninsular India, it decreases eastwards and then increases in the coastal region.

2. METHODOLOGY

The rainfall statistics is computed based on the receipt of rainfall data from about 5100 stations spread over the entire country out which 264 stations and 05 districts were added during 2021. Based on daily rainfall data of these stations, the rainfall statistics at the districts level is computed using the station rainfall values of the district. The Rainfall statistics for the Meteorological (Met.) Subdivisions, States, four broad regions and for the whole country are computed using these district level statistics.

The present publication includes the updated rainfall statistics for the country as a whole, for the four broad regions, 36 Meteorological Subdivisions, States, UTs and 695 Districts of India. The statistics is provided on monthly, seasonal i.e. **Winter** (January–February), **Pre-Monsoon** (March-May), **Southwest (SW) Monsoon** (June-September) and **Post-Monsoon** (October-December), and on **Annual** basis. The Rainfall Normal used in this report are based on the rainfall records for the period from 1961-2010. Percentage departure of rainfall from Normal, have been color coded as per their categories. The list of categories, their corresponding ranges and color codes is given in Table 1.

Table 1. The list of categories, their corresponding ranges and color codes

Category	Departure from Normal	Colour Code
Large Excess (LE)	60% or more	
Excess (E)	20% to 59%	
Normal (N)	-19% to +19%	
Deficient (D)	-20% to -59%	
Large Deficient (LD)	-60% to -99%	
No Rain	-100%	
No Data	Data Not Available	

In this book the chapter are arranged as Country, Broad Regions, Meteorological Sub-Division, States and Districts wise and data was displayed as seasonal, annual and month wise.

Methodology for district-wise

3. RAINFALL STATISTICS FOR THE COUNTRY & BROAD REGIONS

3.1 SEASONAL & ANNUAL

The country received annual rainfall of 105% (123.6cm) of its normal rainfall of 117.7 cm and during SW monsoon season, 99% (87.5 cm) of its normal rainfall of 88.1 cm. The region-wise country's seasonal and annual actual observed rainfall are given at Table 2, and the percentage departure from normal rainfall are given at Table 3.

Table 2: Region-wise seasonal and annual rainfall (mm) - Year 2021

REGIONS	WINTER	PRE-MONSOON	SW MONSOON	POST-MONSOON	ANNUAL
COUNTRY AS A WHOLE	27.8	155.6	874.5	177.9	1796.1
NORTH WEST INDIA	39.0	125.0	576.2	80.6	820.7
CENTRAL INDIA	8.6	85.1	1012.5	106.4	1212.6
SOUTH PENINSULA	56.2	168.3	804.5	444.5	1473.5
EAST & NORTH EAST INDIA	11.7	347.9	1244.5	188.2	1236.4

It may be observed that three homogeneous regions as well as the country as a whole received deficient or large deficient rainfall only during Winter season except South Peninsula where it is large excess. During rest seasons it is normal or above normal. The country was at maximum deficiency in rainfall of 32% during Winter season.

Regionally, lowest negative departure (78%) observed over East & North East India region during winter season where as highest positive departure of 147% was observed in South Peninsula region during Winter season. During SW Monsoon season, lowest rainfall deficiency (-12%) observed over East & North East India, where as maximum 11% departure observed over south peninsula

Table 3: % Departure of region-wise seasonal and annual rainfall - Year 2021

REGIONS	WINTER	PRE-MONSOON	SW MONSOON	POST-MONSOON	ANNUAL
COUNTRY AS A WHOLE	-32%	18%	-1%	44%	5%
NORTH WEST INDIA	-51%	9%	-4%	44%	-3%
CENTRAL INDIA	-43%	127%	4%	40%	10%
SOUTH PENINSULA	247%	39%	11%	60%	29%
EAST & NORTH EAST INDIA	-78%	-8%	-12%	13%	-10%

3.2 MONTHLY RAINFALL

The observed monthly rainfalls for the country as a whole and also for the four broad regions of the country are given at Table 4. The percentage (%) departures from normal rainfall are given at Table 5. The country received maximum rainfall in the month of July as 266.2 mm and minimum in the month of February as 7.6 mm. The highest area weighted rainfall of 356.9 mm was recorded in the month of June in East & Northeast India and the least rainfall recorded was 3.6 mm in the month of January in Central India.

Comparing with Normal, it is observed that for country as whole the maximum positive departure of 86% is in the month of November and maximum negative departure of 68% is in the month of February. For the broad regions of India, it may be observed that, maximum positive departure of 461% was recorded in South Peninsula in the month of January, whereas the maximum negative departure of 88% was observed in the month of February in East & Northeast India.

Table 4: Region-wise actual monthly rainfall (mm) - Year 2021

REGIONS	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC
COUNTRY AS A WHOLE	20.2	7.6	16.7	31.1	107.8	182.4	266.2	196.3	229.6	100.8	56.5	20.5
NORTH WEST INDIA	28.4	10.6	27.0	29.7	68.2	85.6	196.6	140.8	153.2	67.0	5.2	8.3
CENTRAL INDIA	3.6	5.1	5.2	9.3	70.6	197.5	298.9	188.4	327.7	59.5	21.9	24.9
SOUTH PENINSULA	46.0	10.2	6.0	43.0	119.2	166.4	274.9	168.4	194.8	184.9	232.6	27.0
EAST & NORTH EAST INDIA	7.8	3.9	34.4	65.1	248.7	356.9	320.4	354.3	212.9	149.6	11.5	26.8

It may be observed (Table 5) that, the country remained with normal to excess rainfall for all the months except for the months of March, April and June when the rainfall was deficient.

Table 5: % Departure of region-wise monthly rainfall - Year 2021

REGIONS	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC
COUNTRY AS A WHOLE	17%	-68%	-45%	-21%	74%	9%	-7%	-24%	35%	33%	86%	18%
NORTH WEST INDIA	-15%	-77%	-43%	-7%	95%	14%	-7%	-31%	40%	191%	-56%	-60%
CENTRAL INDIA	-52%	-34%	-38%	4%	251%	17%	-7%	-39%	85%	11%	39%	272%

3.3 SOUTHWEST MONSOON – 2021

The rainfall statistics for SW Monsoon months and season for the country is given at Table 6 and its graphical representation is at Figure 2 While the % departure of observed rainfall have been depicted at Figure 3. During the SW Monsoon season, observed rainfall for the country as a whole was -01% from the Normal. On Monthly basis for the country as a whole, rainfall was 9%, -7%, -24% and 35% in the months of June, July, Aug and Sept. respectively.

Table 6: Rainfall (mm) for the country: SW Monsoon Season - 2021

MONTH	OBSERVED	NORMAL	% DEPARTURE FROM NORMAL
JUNE	182.4	166.9	9%
JULY	266.2	285.3	-7%
AUGUST	196.3	258.2	-24%
SEPTEMBER	229.6	170.2	35%
SW MONSOON	874.5	880.6	-1%

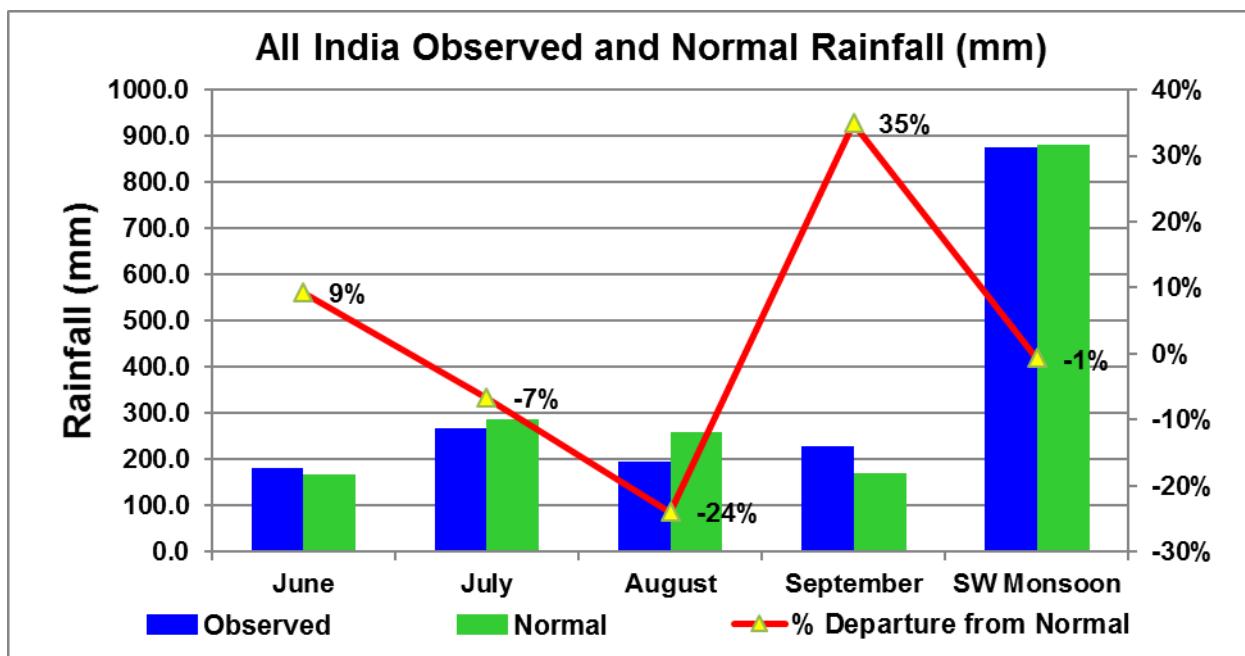

Figure 2: All India Rainfall – SW Monsoon 2021

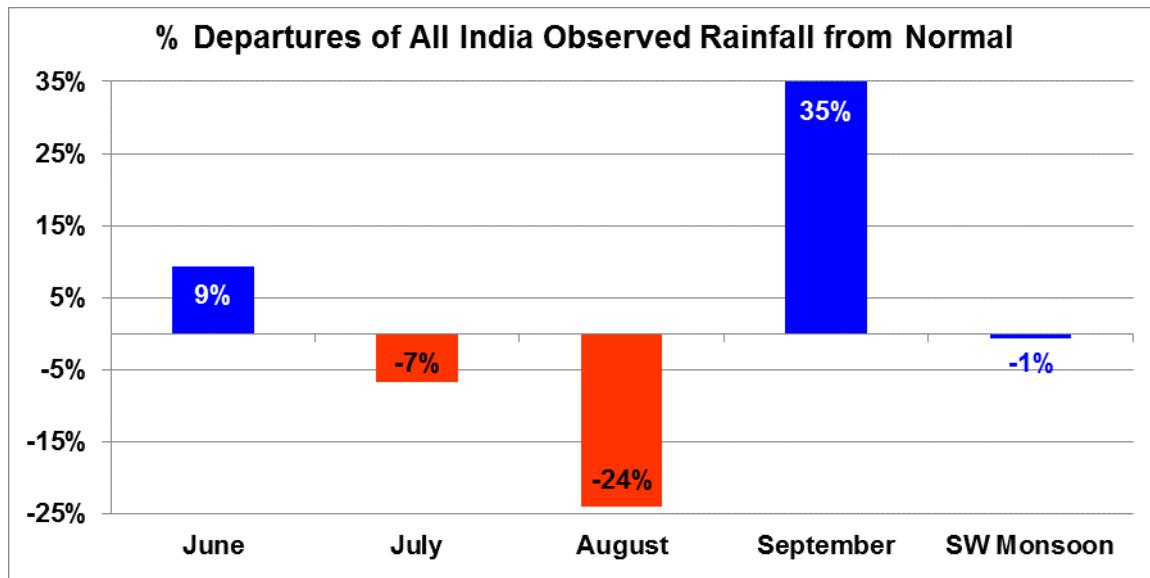

Figure 3: Percent Departure of All India Rainfall – SW Monsoon 2021

3.4 REGION-WISE DAILY RAINFALL SERIES – SW MONSOON 2021

Realtime daily observed rainfall (in mm) and its long term normal (1961-2010) for the country as a whole and for the four homogeneous regions for the season from 1 June to 30 September are shown in Figure 4 to 8. Fig-4 shows that for the country as a whole, averaged observed rainfall was generally above normal on many days during the months of June and September and below normal during July and August with the exception of some days of July where it was above normal. The daily rainfall having below normal value was observed on 66 days of the season. There were two below normal rainfall spells of more

than 10 days for the country as a whole. A Spell of 21 days from 21 June to 11 July and another spell of 17 days from 01 August to 17 August,

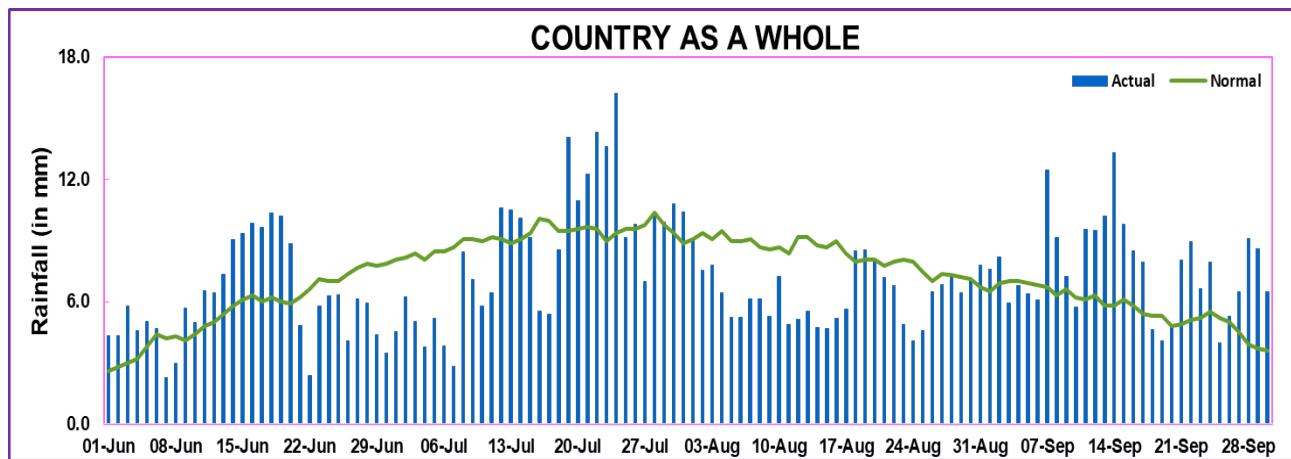

Figure 4: All India Rainfall - SW Monsoon Rainfall Distribution – 2021

Figure 5 shows that For the North West India,; the rainfall averaged was generally normal or above normal on many days during September and below normal on many days during June, July and August. The longest below normal rainfall spell was of 22 days from 21 June to 11 July.

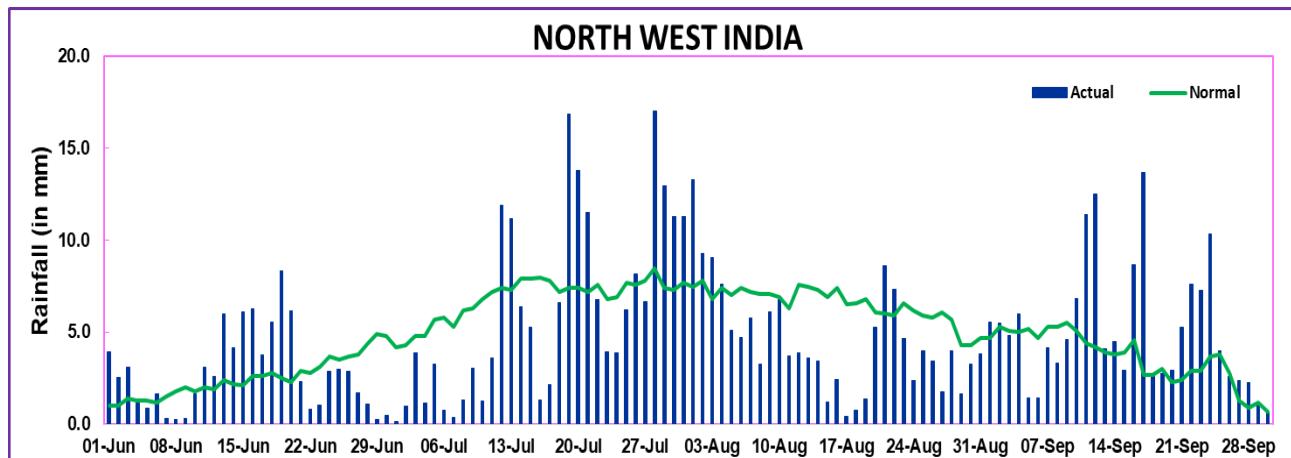

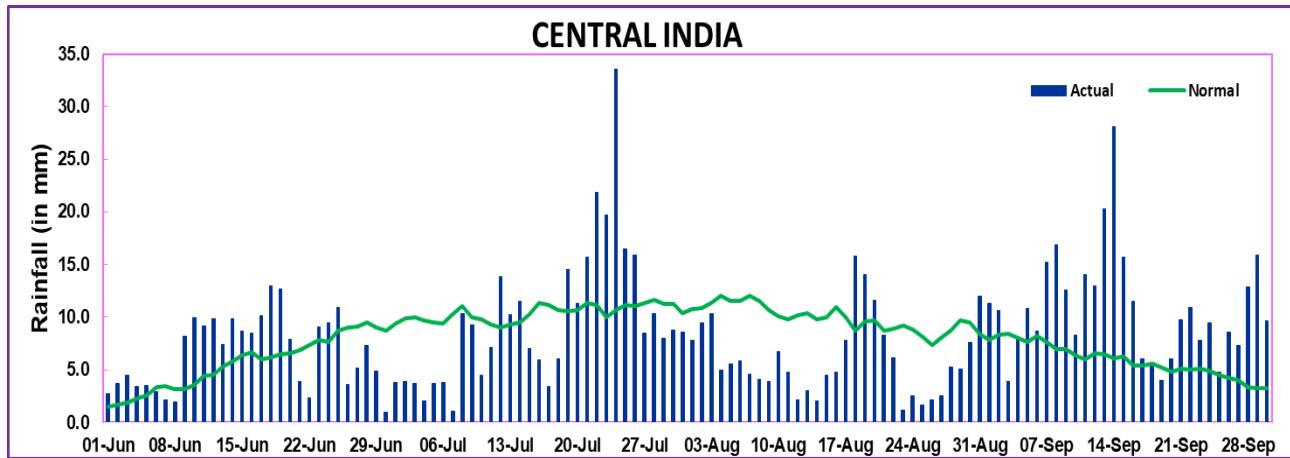

Figure 5: North West India - SW Monsoon Rainfall Distribution – 2021

For the Central India, Figure 6: shows averaged daily rainfall was generally normal or above normal on many days during September and below normal on many days during June, July & August. The longest below normal rainfall spell was of 22 days from 27 July to 17 August, whereas August witnessed only 4 days of above normal rainfall.

**Figure 6: Central India - SW Monsoon Rainfall Distribution – 2021**

For the South Peninsula, Figure 7: shows rainfall averaged was generally normal or above normal on many days during July and below normal on many days during June, August & September. The longest below normal rainfall spell was of 22 days from 25 July to 15 August.

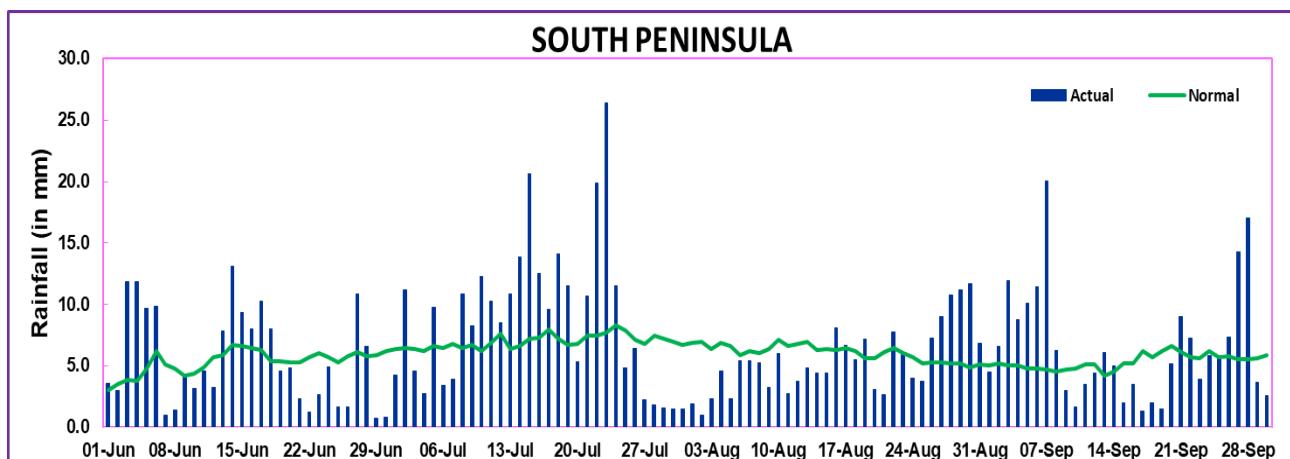

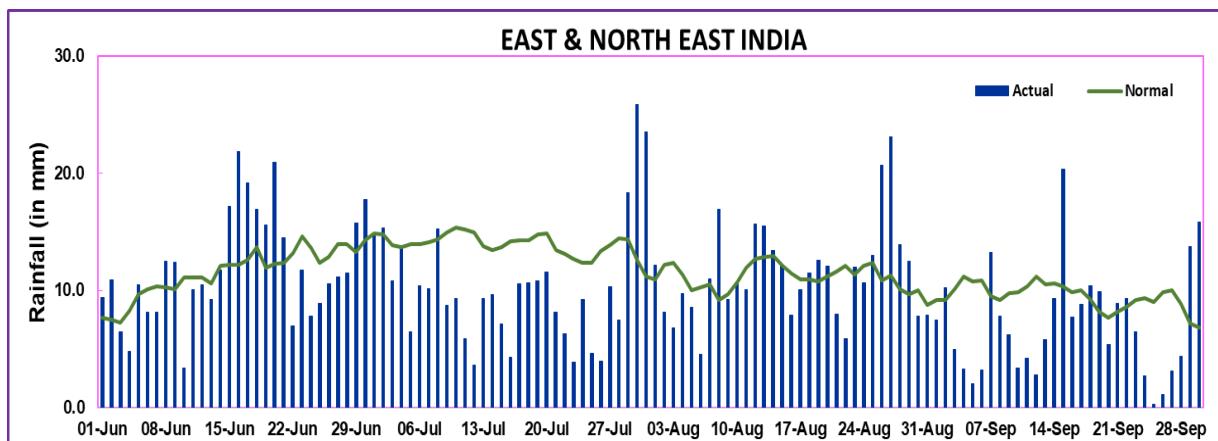

**Figure 7: South Peninsula - SW Monsoon Rainfall Distribution – 2021**

Figure 8: shows that for the East & North East India averaged daily rainfall was normal or above normal on many days during September and below normal on many days during June, July & August. The longest below normal rainfall spell was of 20 days from 09 July to 28 July.

**Figure 8: East & North East India - SW Monsoon Rainfall Distribution – 2021**

4. RAINFALL STATISTICS FOR METEOROLOGICAL SUBDIVISION

4.1 SEASONAL & ANNUAL

Table 7 & 8 shows Seasonal and annual observed rainfall statistics for the year 2021 for all the 36 Met Subdivisions and the percent departure of rainfall. It may be observed that Konkan & Goa received highest annual rainfall of **4032.5** mm and West Rajasthan received lowest annual rainfall of **375.2** mm. During the SW Monsoon season, Konkan & Goa received highest rainfall of **3558.7** mm and West Rajasthan received lowest rainfall of **317.5** mm.

Table 7: Met. Subdivision-wise seasonal and annual rainfall (mm) - Year 2021

On comparing the annual rainfall departures at Table 8, it may be observed that, most of the Met. Subdivisions remained either in “Large Excess”, Excess or in Normal rainfall category except for **5** Met. Subdivisions namely Arunachal Pradesh, Assam & Meghalaya, NMMT, Himachal Pradesh and J & K and Ladakh where it was under Deficient category. None of the Met. Subdivisions remained in Large Deficient category.

During SW Monsoon season also, no Met. Subdivision remained in “Large Deficient” rainfall category while **6** Met. Subdivision i.e., Arunachal Pradesh, Assam & Meghalaya, NMMT, West Uttar Pradesh, J & K and Ladakh and Lakshadweep remained in Deficient rainfall category. For the Monsoon season as well as annually none of the 36 Met. Subdivisions except NMMT recorded the rainfall that was 38% below Normal

Table 8: % Departure of Met. Subdivision-wise seasonal and annual rainfall

4.2 CATEGORY-WISE SEASONAL AND ANNUAL

Statistics for the year 2021 in Table 9 show that annually, **18** Met. Subdivisions remained in Excess and **13** in Normal category of rainfall while **5** Met. Subdivision remained in Deficient category of rainfall. Statistics and chart for category wise seasonal and annual distribution of no. of Met. Subdivisions have been given in Table 9 and Figure 9 respectively.

Table 9: Category wise number of Met. Subdivisions - seasonally and annually

CATEGORY	WINTER	PRE-MONSOON	SW MONSOON	POST-MONSOON	ANNUAL
L. EXCESS	10	17	0	16	0
EXCESS	3	9	10	9	18
NORMAL	1	6	20	6	13
DEFICIENT	8	4	6	5	5
L. DEFICIENT	13	0	0	0	0
NO RAIN	1	0	0	0	0

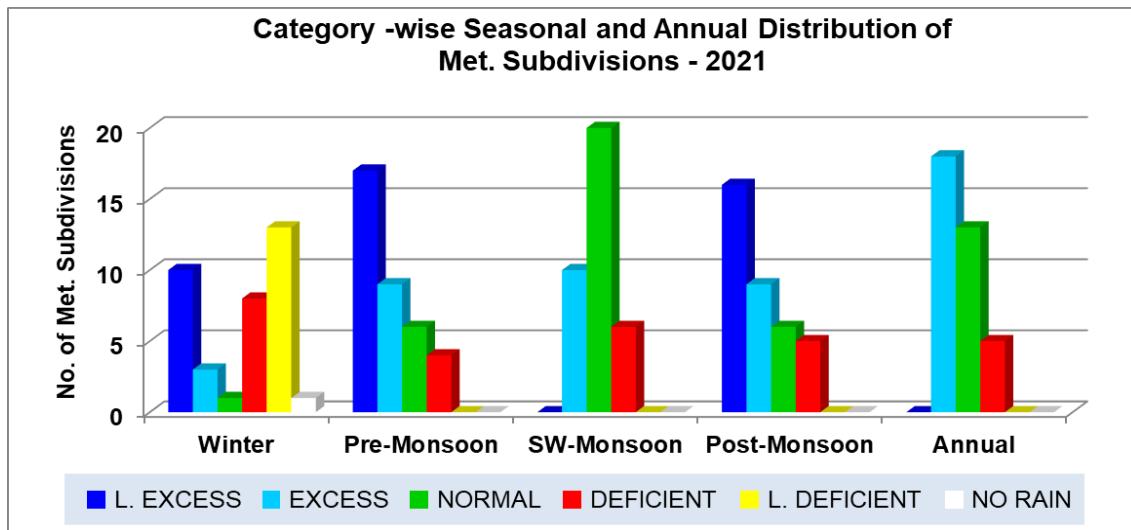

Figure 9: Category-wise Met. Subdivisions – seasonally and annually

Percent distribution of Met. Subdivisional area of the country under different categories in the four seasons and for the year has been depicted in Table 10 and Figure 10.

Table 10: % Distribution of Met. Subdivisional Area - seasonally and annually

CATEGORY	Winter	Pre-Monsoon	SW-Monsoon	Post-Monsoon	Annual
LARGE EXCESS	20%	52%	0%	41%	0%
EXCESS	7%	19%	25%	30%	48%

NO DATA	0%	0%	0%	0%	0%

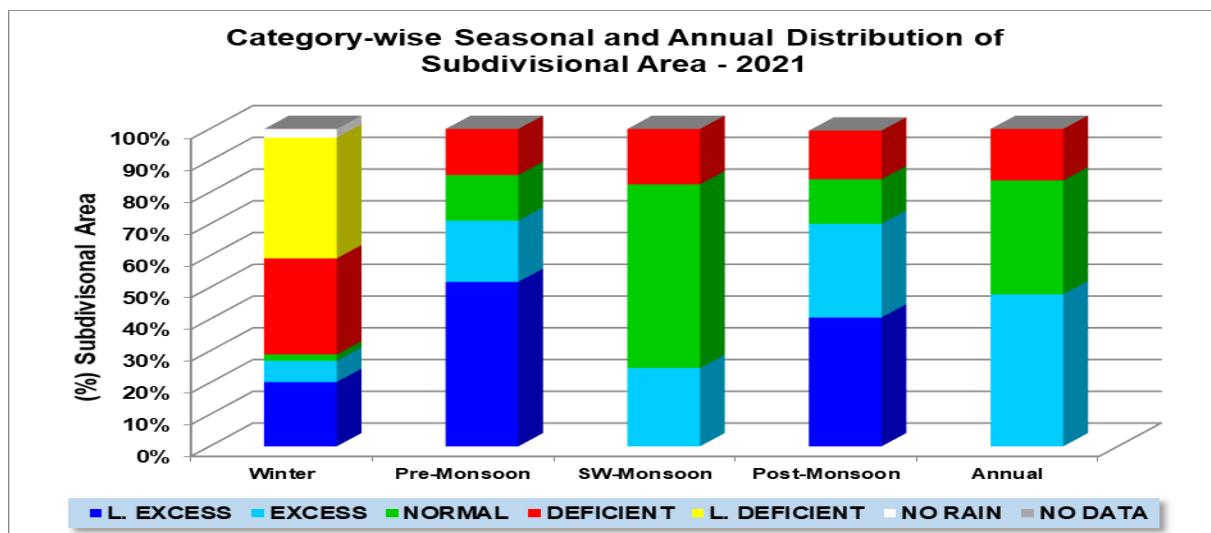

Figure 10: % Area of the Met. Subdivisions under different rainfall categories- Seasonal & Annual

4.3 AREA (%) UNDER RAINFALL DEFICIENCY– SW Monsoon 2021

Area (%) of the 36 Met. Subdivisions of India under different categories of rainfall deficiency during SW Monsoon (June-September) have been given below in tabular form in Table 11 and has been depicted in graphical form in Figure 11 as well.

Table 11: Met. Subdivisional Area (%) under Rainfall Deficiency – SW Monsoon 2021

Deficiency in Rainfall	Deficiency	% Area of Met. Subdivisions of India
< 26 %	No	91%
26 % or more but < 50 %	Moderate	9%
50 % or more	Severe	0%

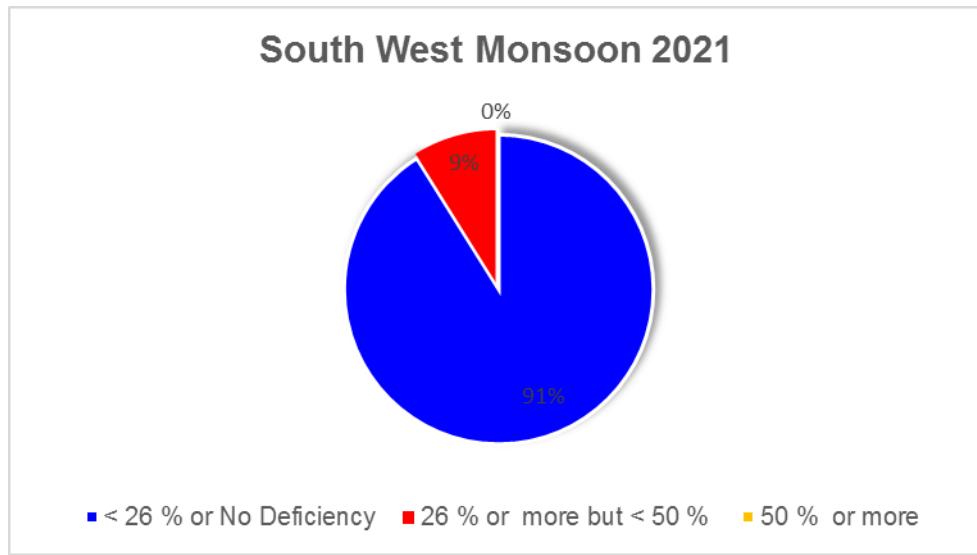

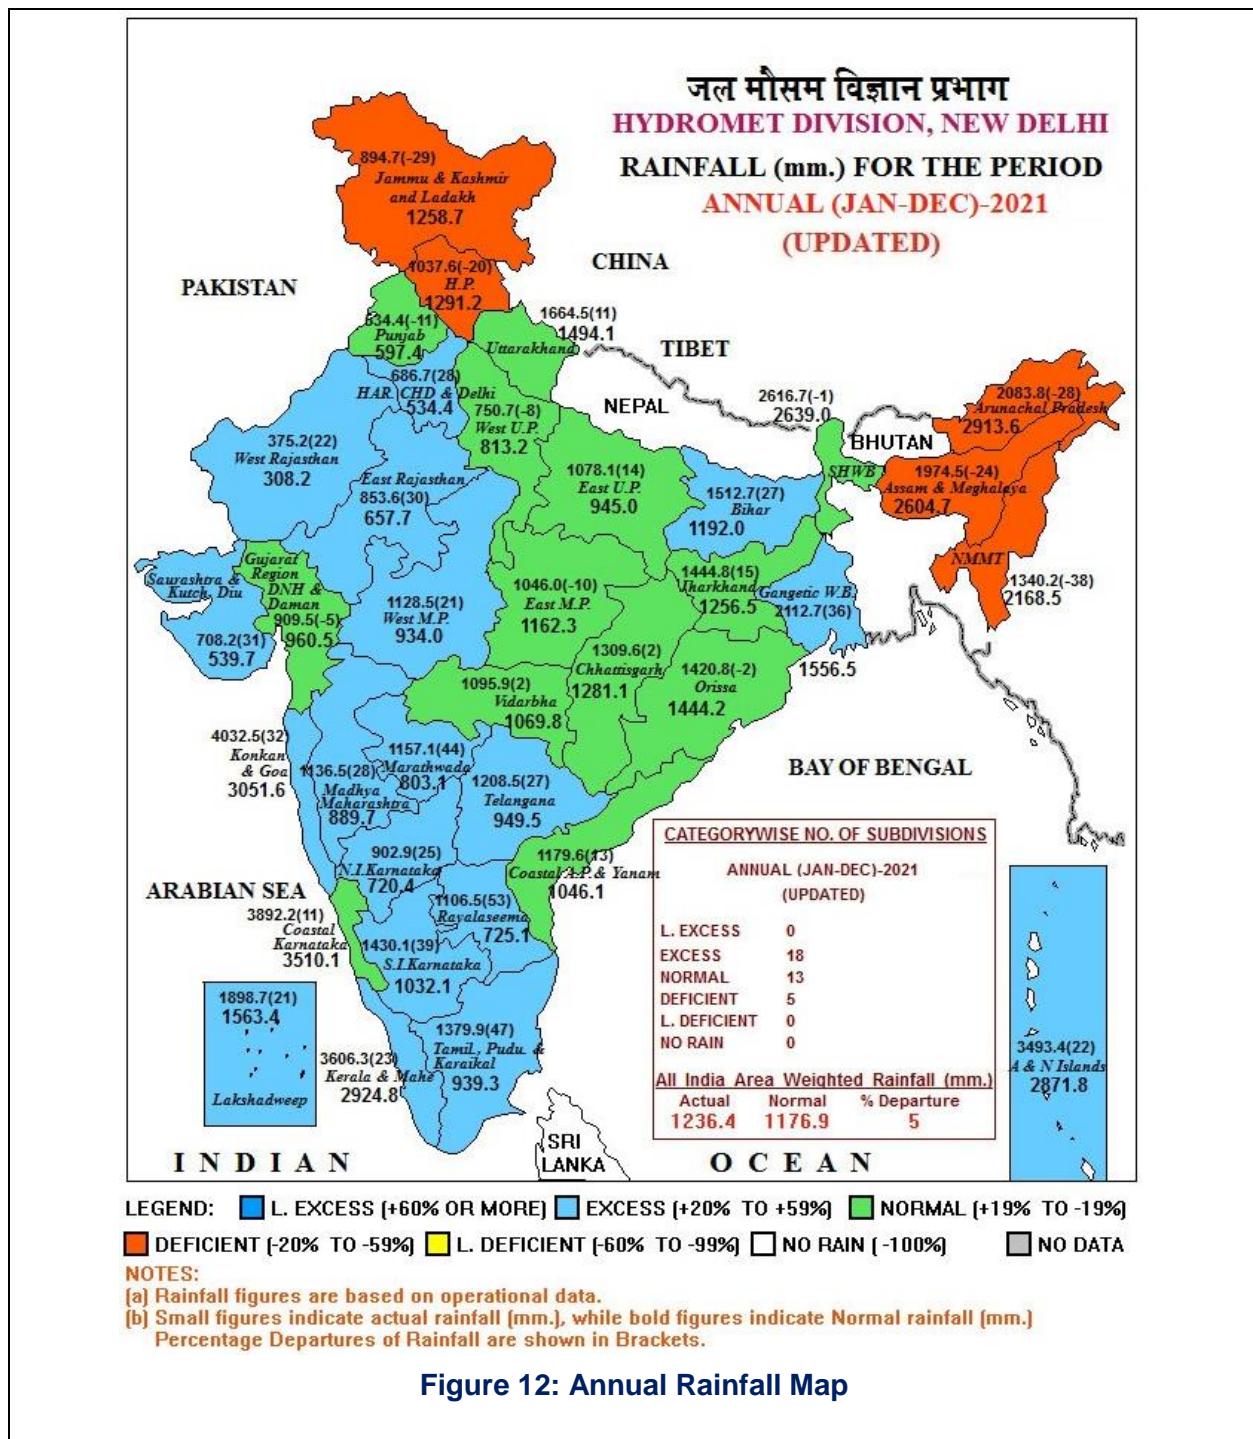

Figure 11: Met. Subdivisional Area (%) under Rainfall Deficiency – SW Monsoon 2021

4.4 ANNUAL & SEASONAL RAINFALL MAPS

Met. Subdivision-wise rainfall maps for the year 2021 and for the four seasons depicting the observed and normal rainfall values along with their percentage departure from Normal with colors defined for different categories are given below at Figure 12 to Figure 16.

The normal rainfall values are shown in bold figures on the map whereas the actual rainfall are shown in small figures. Percentage departures of rainfall are shown within the brackets.

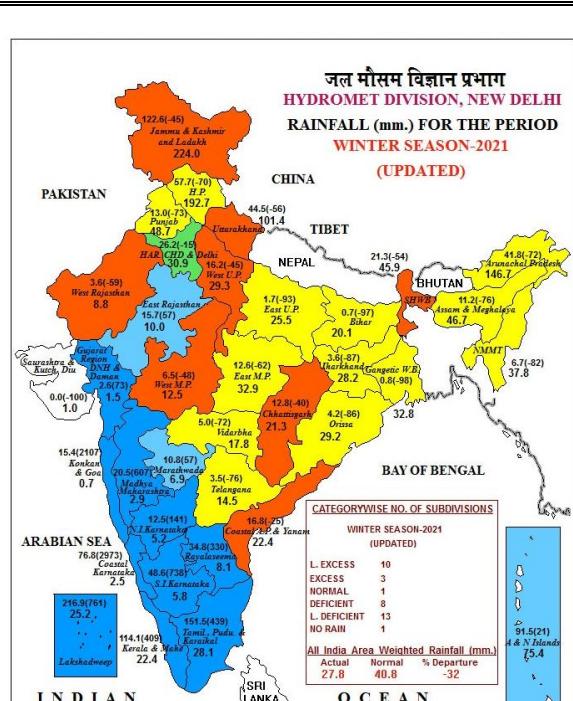

Figure 13: Winter Rainfall Map

Figure 14: Pre-Monsoon Rainfall Map

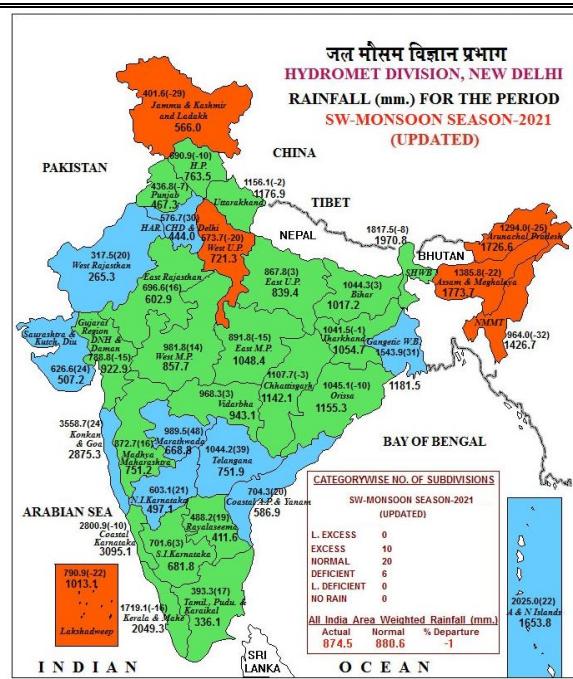

Figure 15: SW Monsoon Rainfall Map

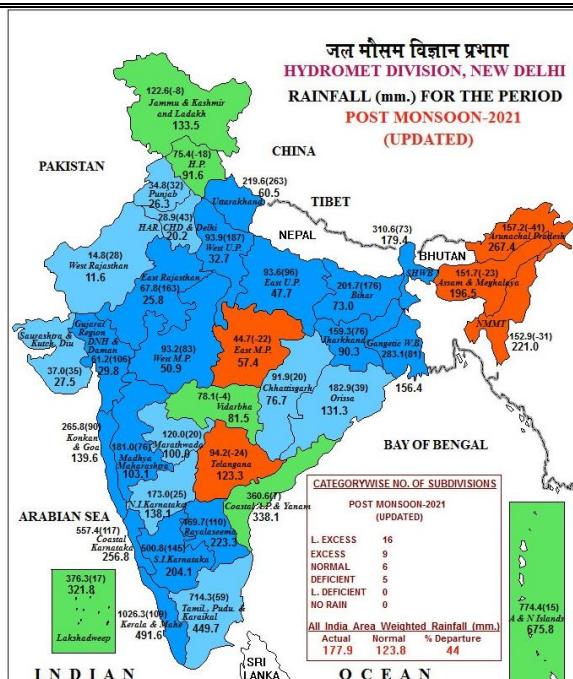

Figure 16: Post-Monsoon Rainfall Map

■ Large Excess [60% or more] ■ Excess [20% to 59%] ■ Normal [-19% to 19%] ■ Deficient [-59% to -20%] ■ Large Deficient [-99% to -60%] ■ No Rain [-100%] ■ No Data

NOTES :

- a) RainFall figures are based on operation data.
- b) Small figures indicate actual rainfall (mm), while bold figures indicate Normal rainfall (mm).
- c) Percentage Departures of rainfall are shown in brackets.

4.6 MONTHLY RAINFALL STATISTICS

Met. Subdivision-wise monthly observed rainfall and % departure of rainfall from their normal have been given in Table 12 and Table 13 respectively.

Table 12: Met. Subdivision-wise monthly rainfall (mm) - Year 2021

4.7 CATEGORY-WISE MONTHLY DISTRIBUTION

The statistics and chart for monthly distribution of no. of Met. Subdivisions in different categories are given below in Table 14 and Figure 17 respectively.

It may be observed (Table 14) that more Met. Subdivision were in “Above Normal” rainfall category from month of April to December except for the month of August & November when they are equal to Deficient/Large Deficient category.

Months of January, February and March have more number of subdivisions in the large deficient/deficient/No Rain category.

Table 14: Category-wise monthly number of Met. Subdivisions - Year 2021

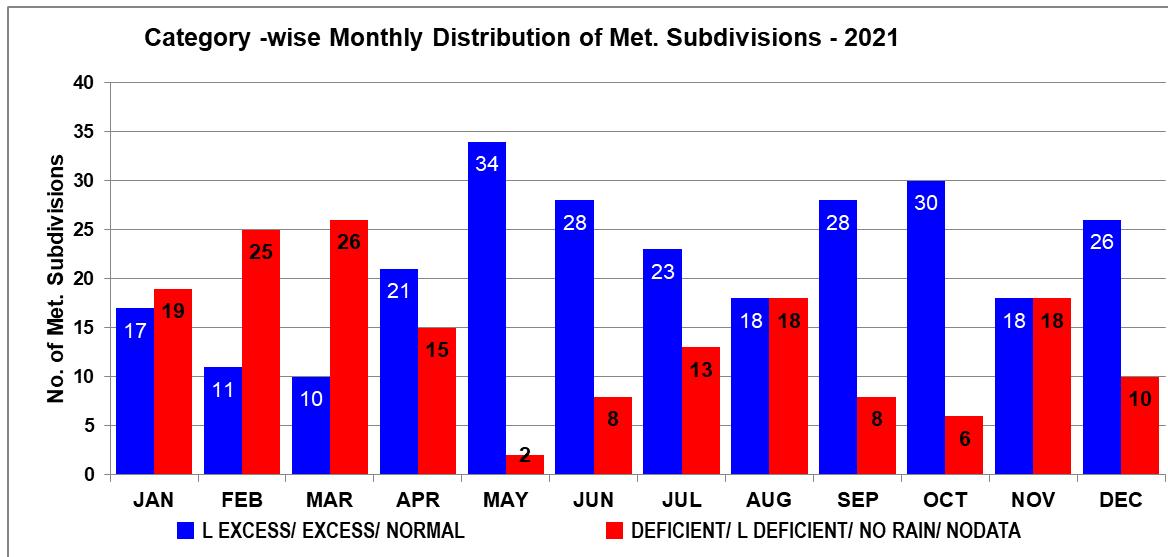

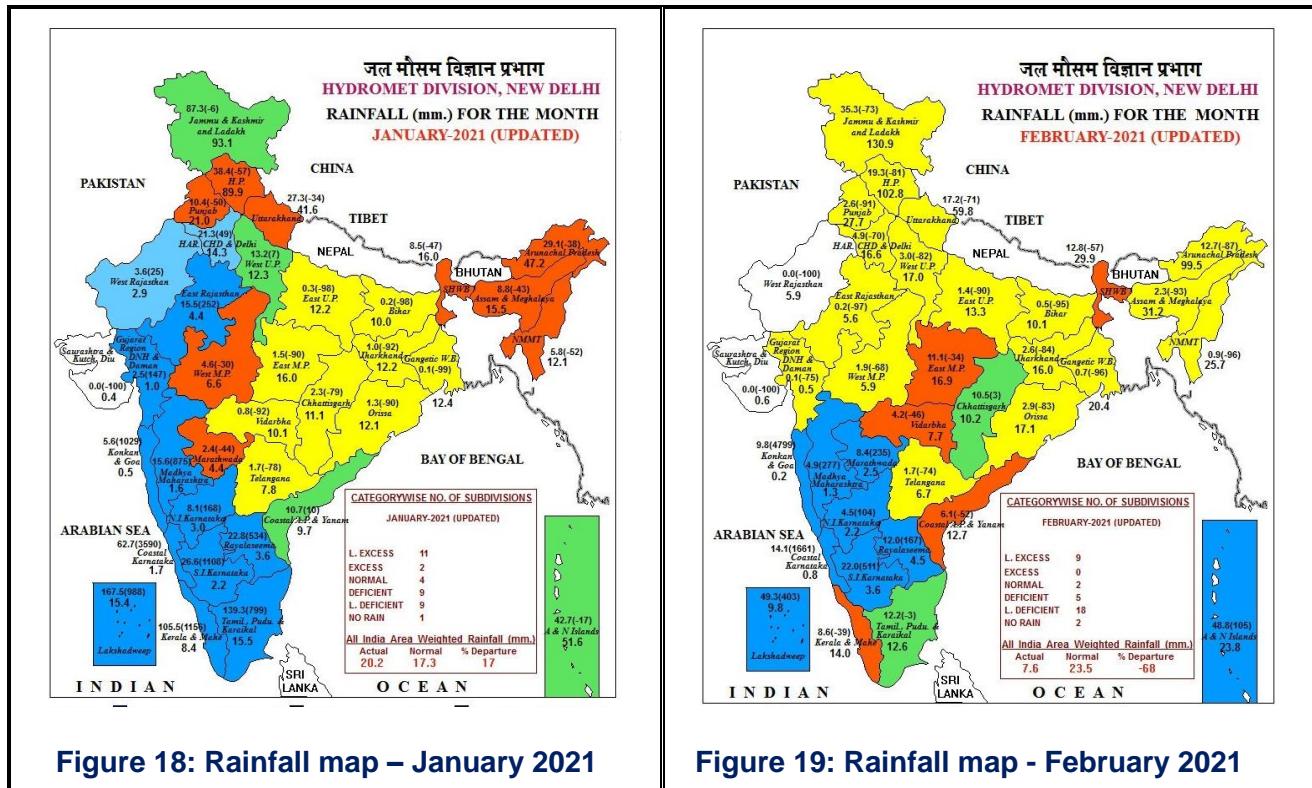

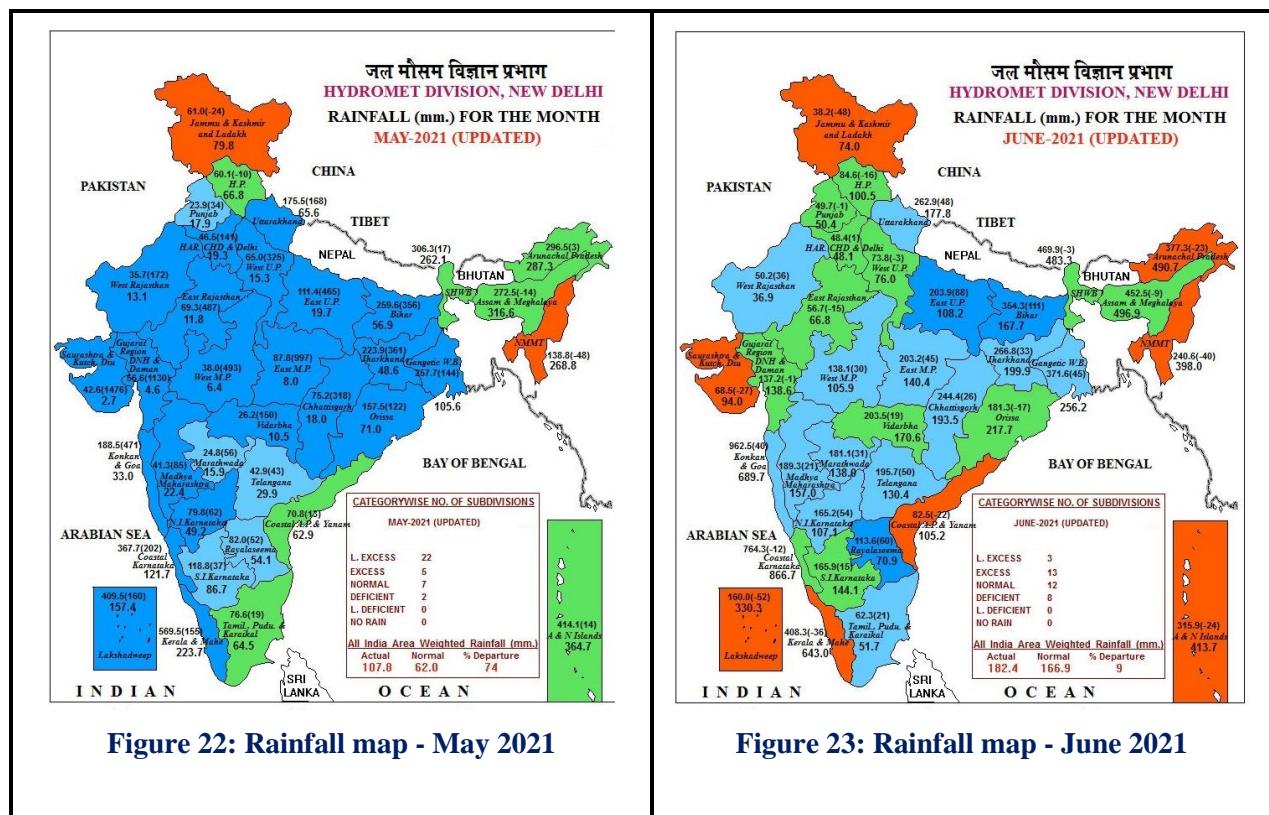

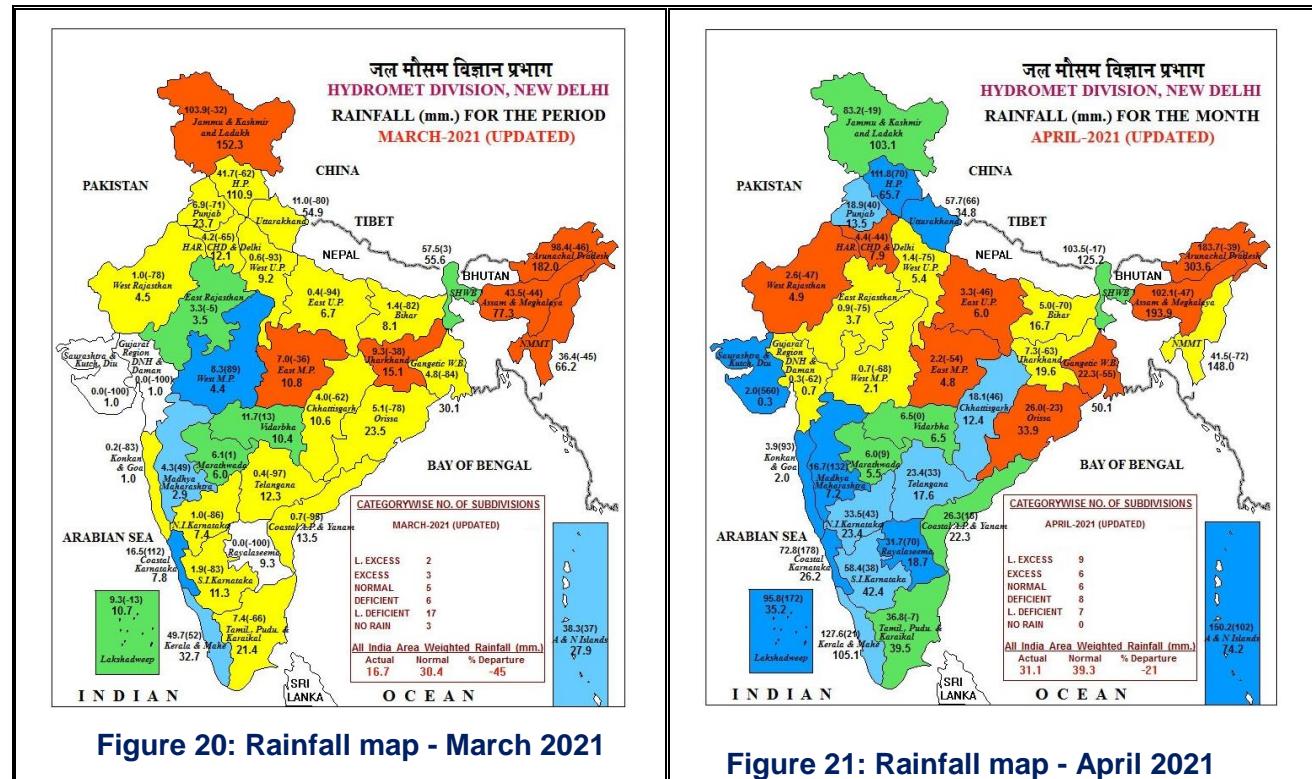

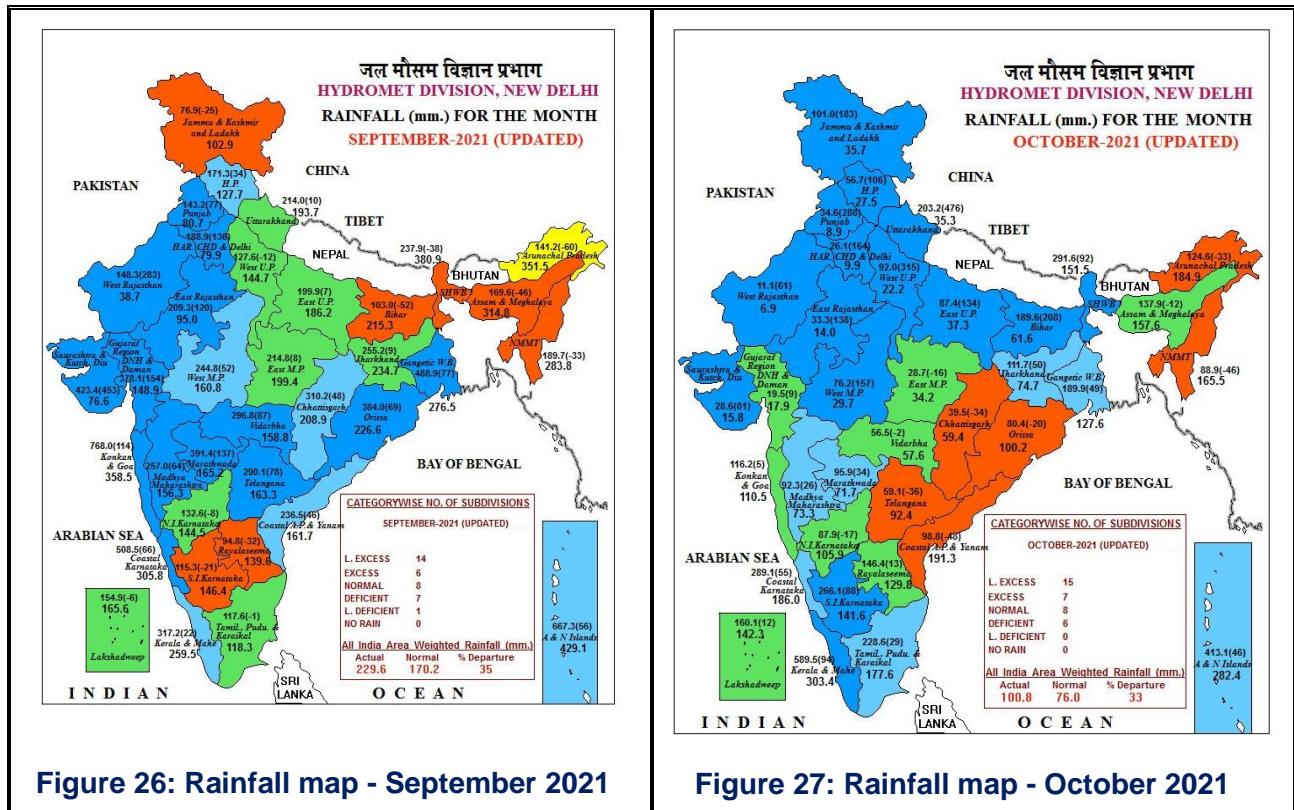

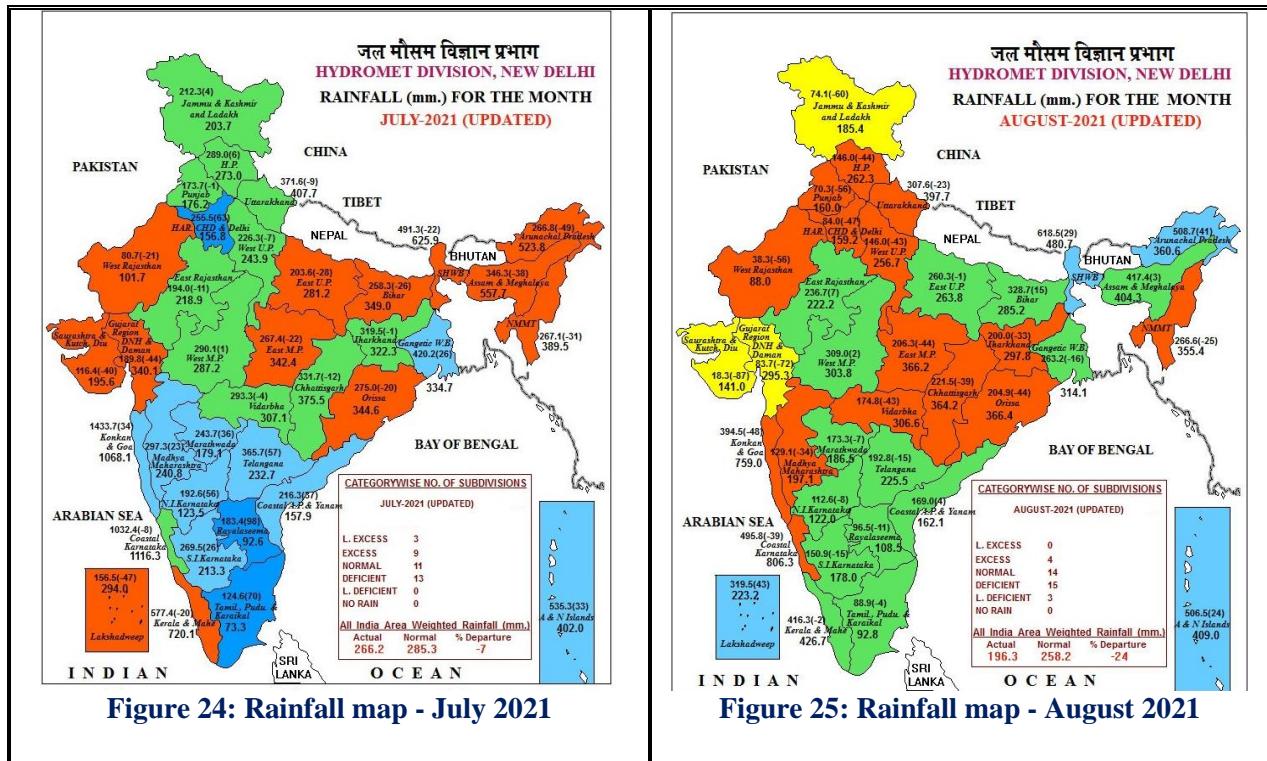

Figure 17: Category-wise distribution of Met. Subdivisions – Monthly - Year 2021

4.8 MONTHLY RAINFALL MAPS

Met. Subdivision-wise rainfall maps depicting the monthly observed and normal rainfall, percent departure from the normal rainfall shaded with category-wise defined colors have been given at Figure 18 to Figure 29. Bold figures on the map are the normal rainfall values where as small figures indicate the actual rainfall. Percentage departures of rainfall are shown within the brackets.

5. STATE-WISE RAINFALL STATISTICS

5.1 SEASONAL & ANNUAL

State-wise seasonal and annual observed rainfall, and its percentage departure from normal rainfall for the states have been given in Table 15. It may be observed that during 2021, annual highest area weighted rainfall of **3947.2 mm** was received at Goa and the lowest rainfall of **57.0 mm** was received at Ladakh (UT).

Table 15: State-wise Seasonal and Annual Rainfall (mm) - Year 2021

S. NO.	Broad Region/ States	Winter	Pre- Monsoon	SW- Monsoon	Post- Monsoon	Annual

On comparing with Normal rainfall, it may be seen that Puducherry (UT) was with the highest positive departure of 54% from its normal where as Ladakh (UT) remained with highest negative departure (45%) from normal.

It may be observed (Table 16) that the Arunachal Pradesh, Nagaland, Manipur, Mizoram and Union Territory of Jammu & Kashmir and Ladakh remained in deficient/large deficient category annually and during all the four seasons. During SW Monsoon season, 27 States/UTs received normal, 10 States/UTs received Deficient/ Large Deficient rainfall.

5.2 CATEGORY-WISE SEASONAL AND ANNUAL DISTRIBUTION:

State-wise rainfall statistics for the year 2021 show most of the states in Large Excess/Excess/Normal category annually and during the Pre Monsoon, Monsoon and Post Monsoon season. Only during Winter Season number of Deficient/Large Deficient/ No Rain states are more. 11 states were in deficient category of yearly rainfall. The statistics and chart depicting the number of states in different categories for different seasons and for the year have been given at Table 17 and Figure 66 respectively.

Table 17: Category-wise Number of States - Seasonally and Annually - Year 2021

CATEGORY	WINTER	PRE-MONSOON	SW MONSOON	POST-MONSOON	ANNUAL
L. EXCESS	6	13	0	14	0
EXCESS	3	8	5	9	18
NORMAL	4	7	22	6	8

NO DATA	0	0	0	0	0

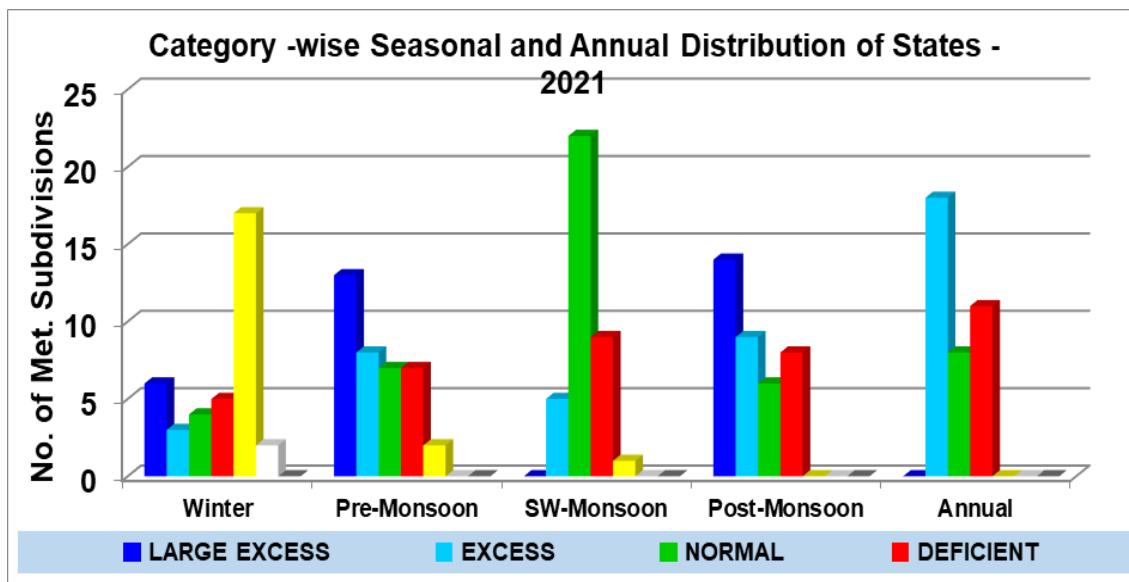

Figure 66: Category-wise distribution of States – Seasonally and Annually

Percent distributions of area of the states of the country under different categories in the four seasons and for the year have been depicted in Figure 67.

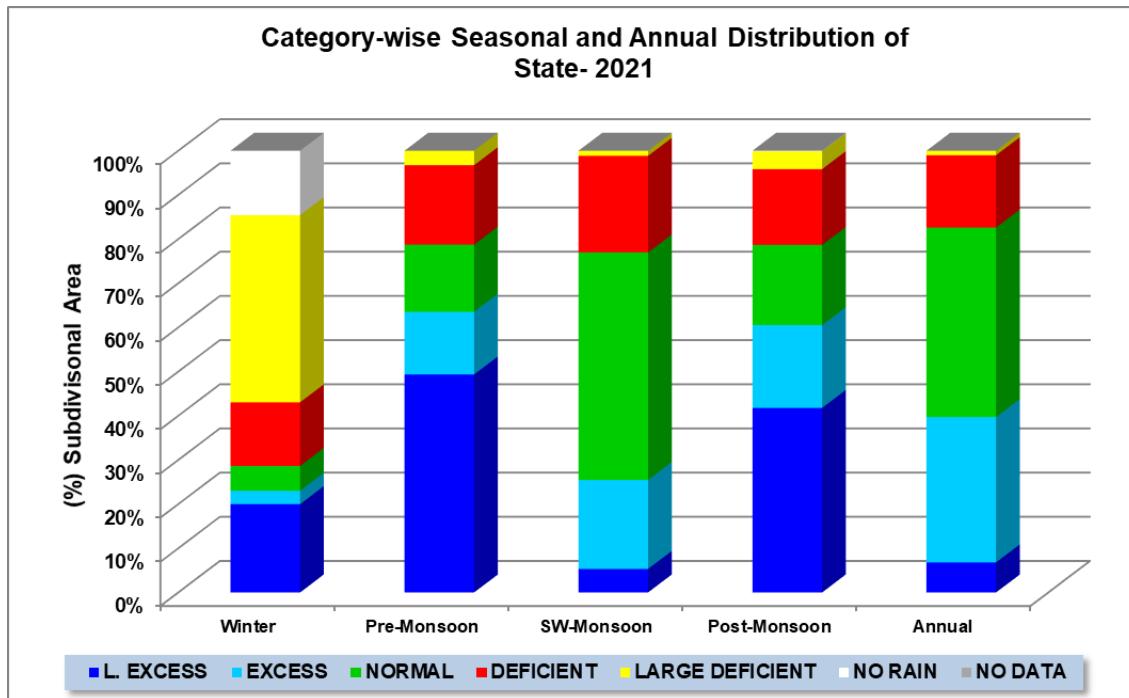

Figure 67: % Area of the country under different categories – Seasonally & Annually

5.3 AREA (%) UNDER RAINFALL DEFICIENCY– SW MONSOON 2021

Area (%) of the 37 states and UTs of India under different categories of rainfall deficiency during SW Monsoon (June-September) have been given below in tabular form in Table 18 and has been depicted in graphical form in Figure 68 as well. During SW Monsoon season 2021, only **1%** area of States of the country experienced severe rainfall deficiency, **7%** of States experienced moderate rainfall deficiency and **92%** of the State-wise area did not reports No deficiency.

Table 18: Area (%) of States of the country under Rainfall Deficiency – SW Monsoon 2021

Deficiency in Rainfall	Deficiency	% Area of States of Country
25 % or less	No	92%
26 % or more but < 50 %	Moderate	7%
50 % or more	Severe	1%

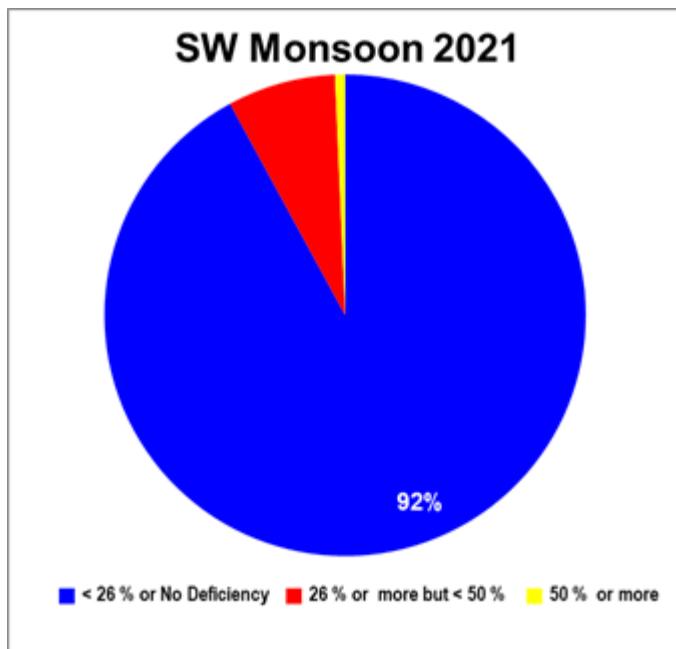

Figure 68: Area (%) of States under Rainfall Deficiency – SW Monsoon 2021

5.4 MONTHLY RAINFALL STATISTICS

State-wise monthly observed rainfall (mm) for the states have been given in Table 19. During SW Monsoon season, highest monthly rainfall of **1272.9** mm occurred over the state of Goa in the month of July and minimum rainfall of **0.9** mm occurred over the Union Territory of Ladakh in the month of August.

State-wise percentage departure of monthly rainfall from their monthly normal rainfall have been given in Table 20. It is observed that months of January, February, March in Deficient/ Large Deficient/ No Rain category of rainfall. All the States in Central and South Peninsular region were in Large excess/excess/Normal Rainfall category during the months of May and September.

All the states of Central India experienced monthly rainfall in normal/excess/Large-excess category during months of May, Sept and December While States in Northwest India region had monthly average rainfall in the normal/excess/Large excess category in the months of October

5.5 MONTHLY CATEGORY-WISE DISTRIBUTION:

The statistics and chart depicting the monthly distribution of number of states in different categories during the year have been given at Table 21 and Figure 69 respectively.

Many states remained in Deficient/Large-Deficient /No Rain rainfall category during the months of January, February, and March. However, during the months of May to July, many experienced monthly average rainfall in Large Excess/ Excess /Normal category.

Table 21: Category-wise Number of States - Monthly - Year 2021

■ Large Excess [60% or more] ■ Excess [20% to 59%] ■ Normal [-19% to 19%] ■ Deficient [-59% to -20%] ■ Large Deficient [-99% to -60%] ■ No Rain [-100%] ■ No Data

NOTES :

- a) RainFall figures are based on operation data.
- b) Small figures indicate actual rainfall (mm), while bold figures indicate Normal rainfall (mm).
- c) Percentage Departures of rainfall are shown in brackets.

6. DISTRICT-WISE RAINFALL STATISTICS

6.1 SEASONAL & ANNUAL

The rainfall statistics for 695 districts of India was prepared during the year 2021. The district-wise observed seasonal and annual rainfall for the districts whose data are received throughout the year is given in Table 22. Also, the percent departures of observed rainfall from their Normal have been given in Table 23. It may be seen that the rainfall for some of the districts are not available, which is due to non-availability of data either by sudden developments of faults in the instruments or by remote/difficult locations of the stations in the districts. Annually, the District of East Khasi Hills in Meghalaya received the highest rainfall of 5160 mm whereas the District Ladakh in Leh (UT) received the lowest rainfall of **41.7** mm, which resembles with the normal pattern of rainfall in India.

Table 22: District-wise seasonal and annual Rainfall (mm) - Year 2021

Period : 01-01-2021 To 31-12-2021

DISTRICT-WISE RAINFALL STATISTICS

6.2 CATEGORY-WISE SEASONAL AND ANNUAL DISTRIBUTION

The category-wise seasonal and annual distribution of no. of districts of India has been given in Table 24 and a chart depicting the distribution is also given at Figure 106. It may be observed that out of the 695 districts, in Pre- Monsoon, Monsoon, Post Monsoon and annually more than $\frac{3}{4}$ th of the districts experienced large excess, excess or normal rainfall, 8 districts during Monsoon and 28 districts during Post Monsoon were found to be in Large Deficient Category. Annually, only 7 districts were in Large deficient Rainfall Category Winter season had more than $\frac{3}{4}$ th of the districts of the country “Below Normal” Rainfall.

Table 24: Category-wise Number of Districts - Seasonally and Annually - Year 2021

CATEGORY	WINTER	PRE-MONSOON	MONSOON	POST-MONSOON	ANNUAL
L. EXCESS	135	341	37	290	47
EXCESS	21	98	140	130	227
NORMAL	39	105	358	126	296
DEFICIENT	100	120	152	119	113
L. DEFICIENT	294	25	8	28	7
NO RAIN	105	2	0	1	0
NO DATA	1	4	0	1	5

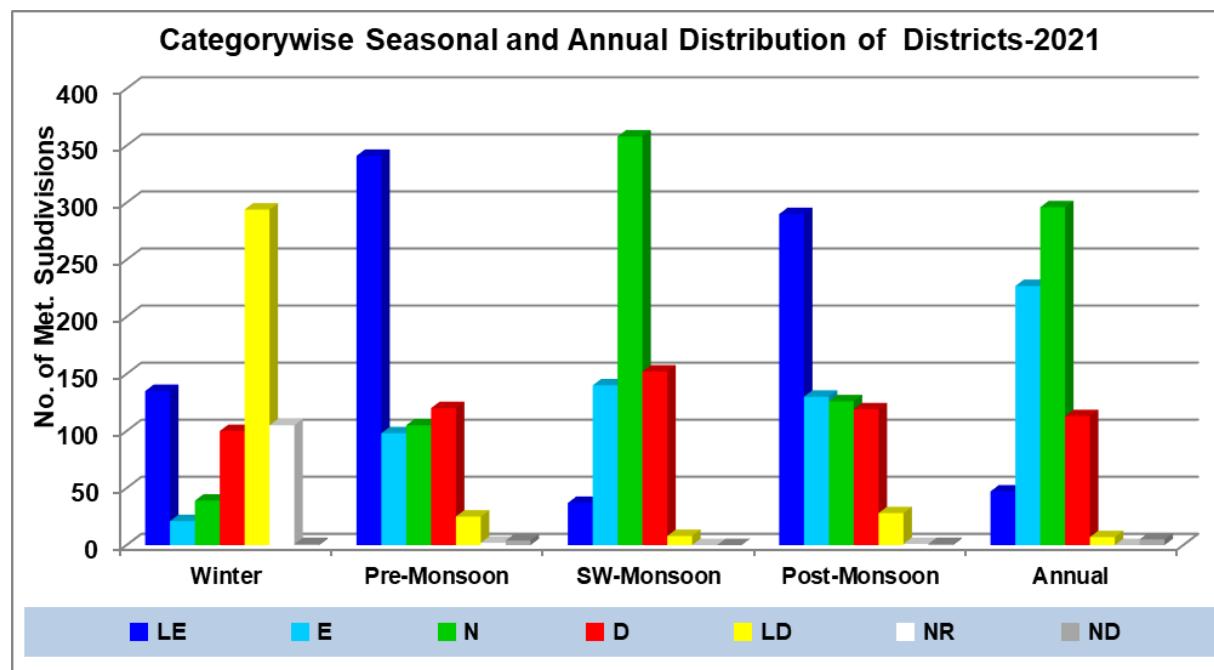

Figure 116: Category-wise Seasonal and Annual Distribution of No. of Districts – 2021

Distribution of districts of India in terms of their areas under different categories in the four seasons and for the year 2021 has been depicted in Figure 117.

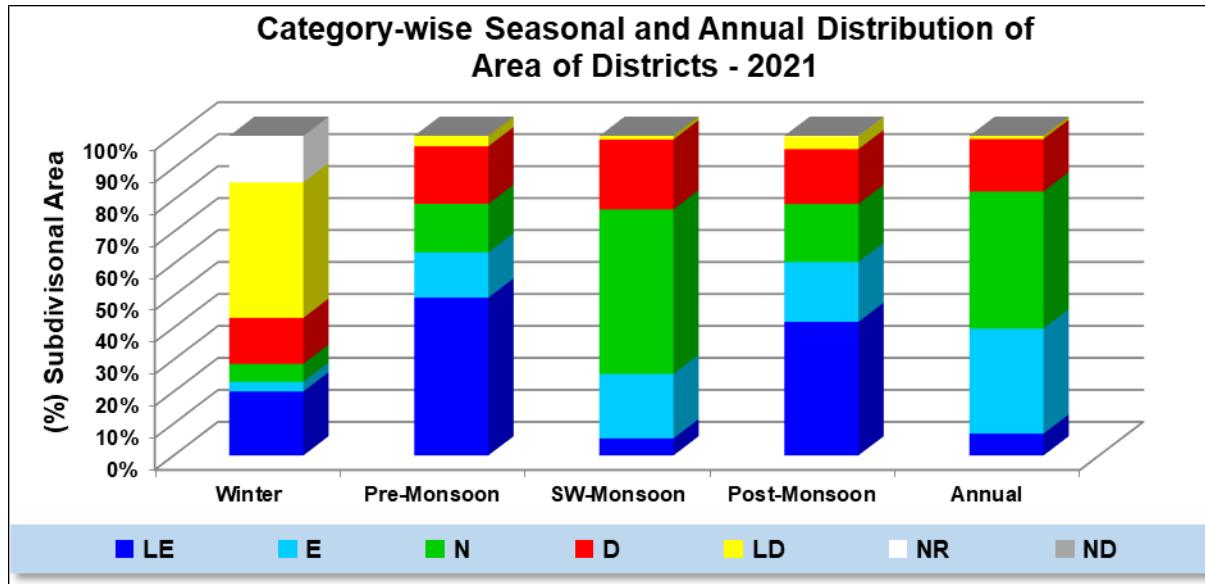

Figure 117: Category-wise distribution of Area of Districts – Seasonally and Annually – Year 2021

6.3 MONTHLY RAINFALL STATISTICS

The district-wise observed monthly rainfall is given in Table 25. Also, the percent departures of observed monthly rainfall from their Normal have been given in Table 26. The rainfall statistics in respect of the districts whose data is not available throughout the year have not been included in these tables.

Table 25: District-wise Monthly Rainfall (mm) – Year 2021

7. ANNUAL AND MONSOON RAINFALL FROM 2000 TO 2021

The annual and monsoon rainfall and their respective departures from normal rainfall from the years 2000 to 2021 are shown in Table 30 and Figure 119. Of the last 22 years, 2021 has proved to be the second year after 2005 that had reported maximum +ve % departures from Normal despite –ve % of the Monsoon season (99% of LPA). Till 2021, though 20 years have been declared as Normal Monsoon year with but annually +ve % departures were reported only in four years viz 2005 ,2010, 2013, and 2019 and Monsoon season wise in the years 2003,. 2007, 2010, 2013 and 2019.

Table 30: SW Monsoon and Annual Rainfall (2000-2021)

YEAR	SW – MONSOON RAINFALL (mm)		ANNUAL RAINFALL (mm)	
	RAINFALL	% DEPARTURE	RAINFALL	% DEPARTURE

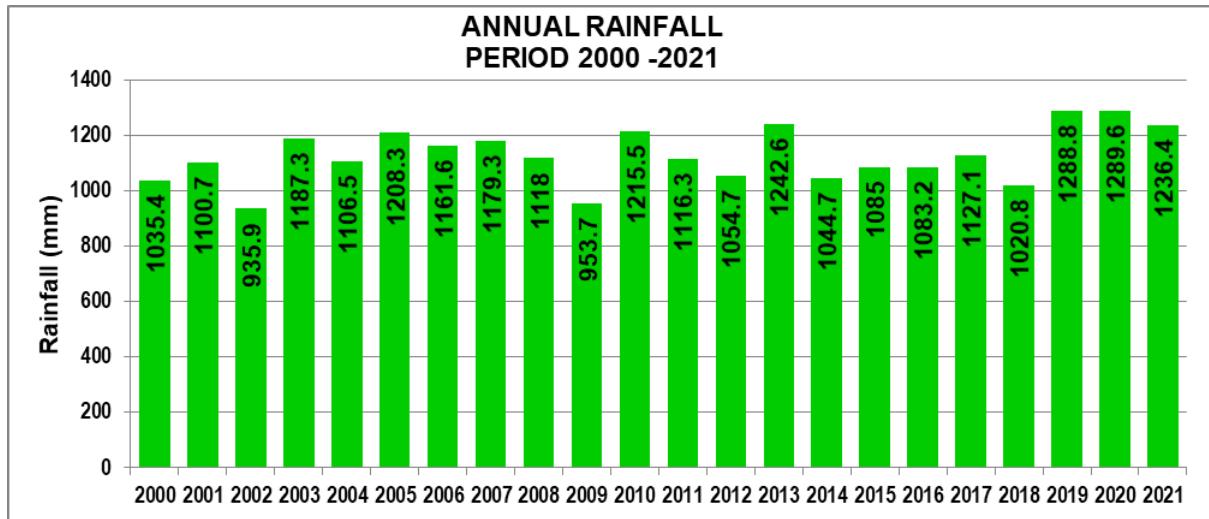

Figure 119: Annual Rainfall 2000-2021

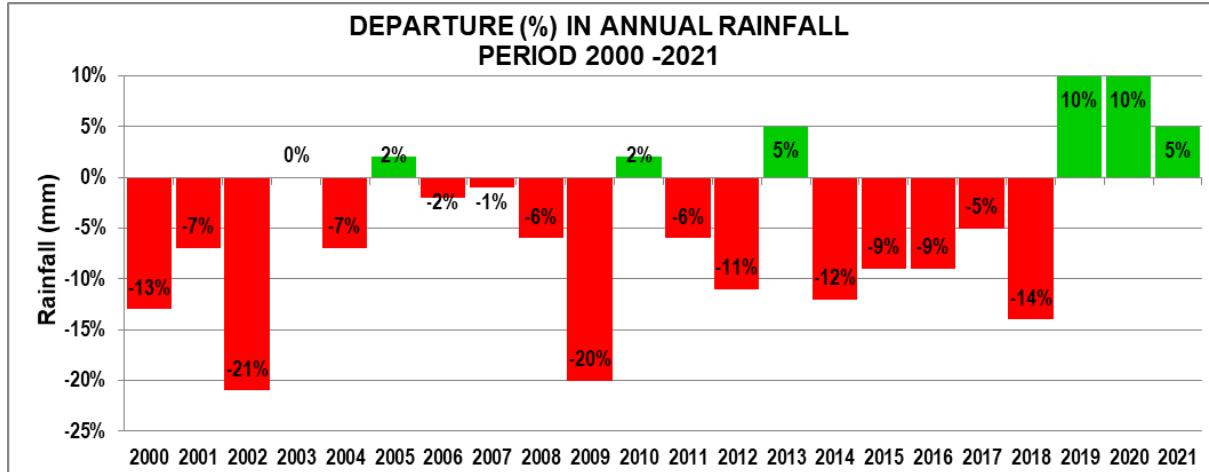

Figure 120: % Departures of Annual Rainfall 2000 – 2021

During last 22 years, it is second time (2005, 2021) that the country wise annual rainfall received was positive departures from Normal despite negative departures from Normal for the southwest monsoon season for country as a whole.

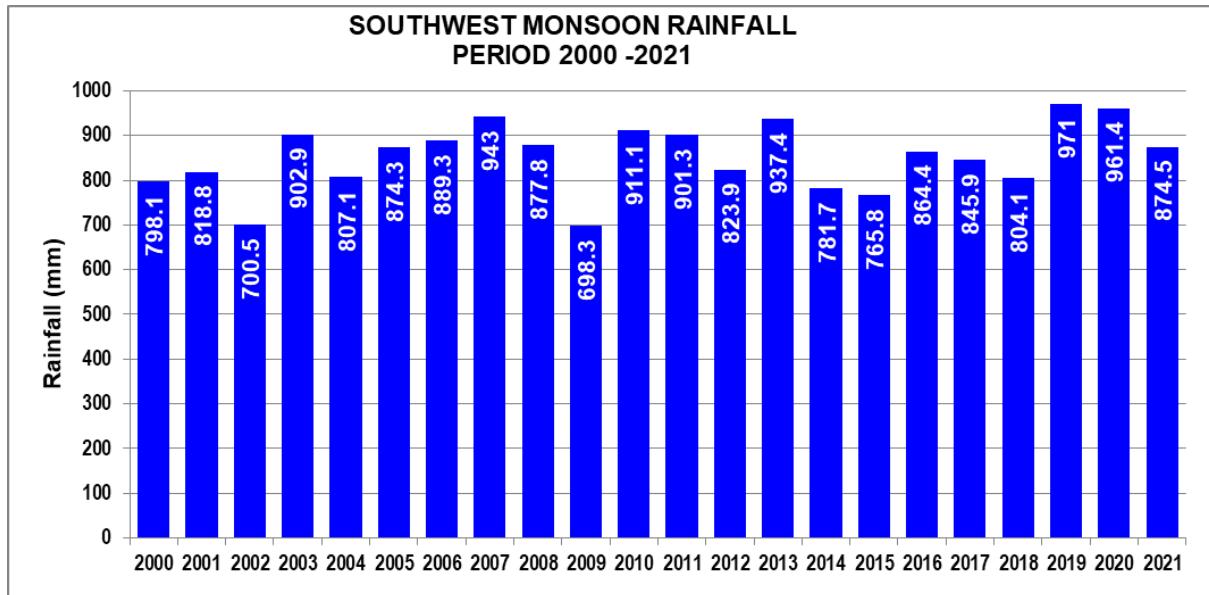

Figure 121: SW Monsoon Rainfall 2000-2021

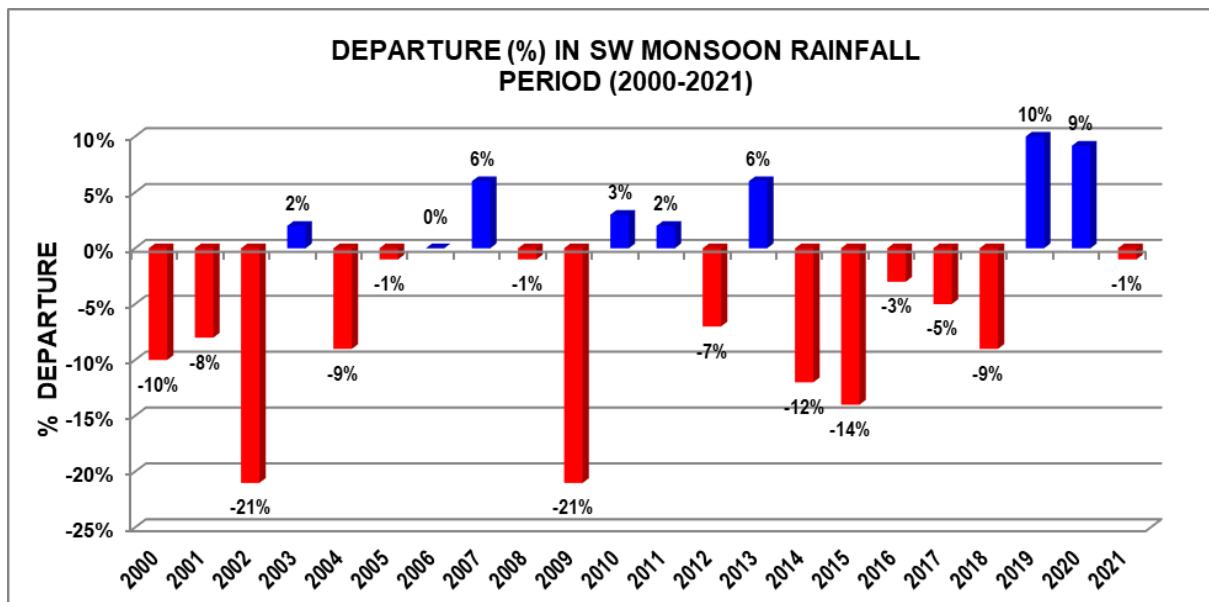

Figure 122: % Departures of SW Monsoon Rainfall 2000 – 2021

8. EXTREME RAINFALL EVENTS

An extreme rainfall event is one in which 204.5 mm (21 cms) or more of rain falls over a region within 24 hours.

There has been an increasing trend in the high impact rainfall events especially during the last decade. Some of the watershed events have happened during this period. Chennai (2015), Kedarnath (2013), Kerela (2018) and Mumbai (2018) floods were characterized by torrential downpour leading to Flash Floods in the region. The Indian southwest monsoon from June to September has some intra-seasonal oscillations and these oscillations are sometimes associated with very intense rain episodes over different parts of India leading to

significant impact which are both visible (Losses in terms of Life and property) and non-visible impacts (social and psychological).

India has experienced/recorded 425 “extreme rainfall events” during 2021. An analysis of daily rainfall between 1901 and 2010 by the Indian Institute of Tropical Meteorology (IITM), Pune, showed a decadal increase of about 6% in “extreme rainfall”, events with the frequency increasing post-1981. Table 31 shows the extreme rainfall events during the Year 2021 along with the places where such events have occurred with rainfall amount in CM.

Table 31: Extreme Rainfall events during 2021

The frequency of the occurrences of extreme rainfall events pan India shows a peak of 152 extreme events ($r/f \geq 21\text{ cms}$) occurring in the month of July spread over 19 days followed by the month of September with 104 events spread over a period of 13 days making July as the most active month for such activities Fig (123).

EXTREME RAINFALL EVENTS

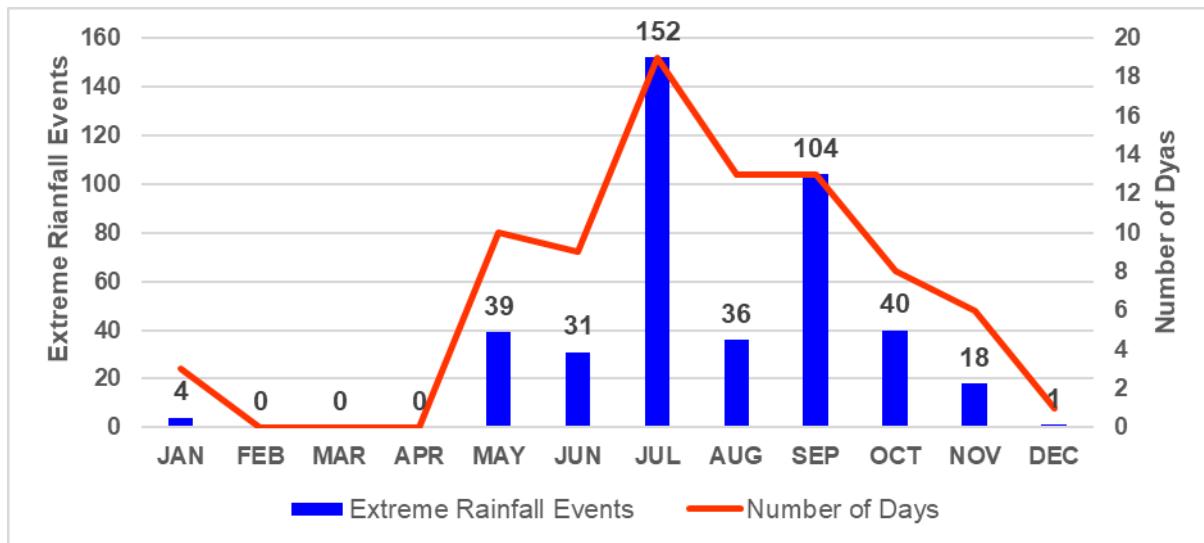

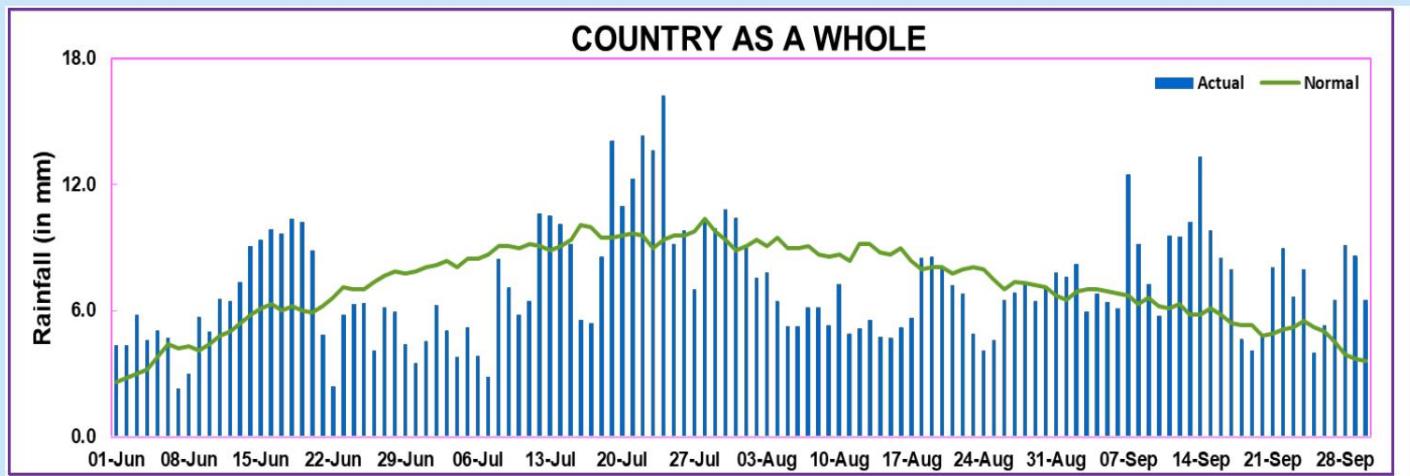

Figure 123: Extreme Rainfall Events/Days for Country a whole during 2021

9. SALIENT FEATURES OF RAINFALL DURING 2021

1. The country received actual annual rainfall of **1236.4** mm which was **105%** of its long period average (LPA).
2. The country received actual SW Monsoon season (June to September) rainfall of **874.5** mm which was **99%** of its long period average (LPA).
3. The rainfall for the country as whole during Pre-monsoon, Post Monsoon and Winter season was **155.6mm**, **177.9** mm & **27.8** mm which was **118%**, **144%** & **68%** of LPA respectively.
4. The seasonal rainfall for the country as a whole was more than the normal value for the Pre-monsoon and Post Monsoon.
5. Rainfall distribution during SW Monsoon season:
 - a. **Region Wise:** North West India, Central India, South Peninsula, East & North East India received actual rainfall of 576.2 mm, 1012.5 mm, 804.5 mm, 1244.5 mm which was 99%, 129%, 116%, 88% of LPA respectively.
 - b. **Month Wise:** The actual rainfall for the country as a whole during June, July, August & September was 182.4 mm, 266.2 mm, 196.3 mm, 229.6 mm which was 109%, 93%, 76% and 135% of LPA respectively.
 - c. **Met Sub Division Wise:** Out of 36 met sub divisions, 10 met sub divisions received Excess rainfall, 20 met sub divisions received Normal rainfall and 6 met sub divisions received Deficient rainfall.
 - d. **District Wise:** As per availability of data, out of 695 districts for which rainfall statistics was prepared, 37 districts received Large Excess rainfall, 140 districts received Excess rainfall, 358 districts received Normal category of rainfall, 152 districts received Deficient rainfall and 8 districts received Large Deficient rainfall.
6. The rainfall deficiency for the country as a whole was maximum (32%) during Winter season.
7. Annual and seasonal rainfall was less than the normal value for East & Northeast India.
8. In the four meteorological homogeneous regions, highest positive departure of 247% was experienced in South Peninsula during Winter season, whereas highest negative departure of 78% was observed in East & Northeast India during Winter season.
9. Month wise, maximum positive departure of 461% was recorded in the month of January in South Peninsula and the maximum negative departure of 88% was recorded in the month of February in East & North-East India.
10. Met sub-division-wise Annual and Seasonal rainfall distribution:
 - a. **Annual:** Konkan & Goa received highest rainfall of 4032.5 mm and Haryana; Chandigarh & Delhi received lowest annual rainfall Of 375.2 mm.
 - b. **SW Monsoon season:**
 - i. Konkan & Goa received highest rainfall of 3558.7 mm and West Rajasthan received lowest rainfall of 317.5 mm.
 - ii. Nagaland, Manipur, Mizoram & Tripura recorded highest deficiency of 32% whereas highest positive departure of 48% was recorded in Marathawada.

11. Annually, the District of East Khasi Hills in Meghalaya received the highest rainfall of 5245.3 mm where as the District Ladakh in Leh (UT) received the lowest rainfall of 65.5 mm.
